QUESTION 1

You need to retrieve the last_reboot_reason value from a Junos device. Which Ansible Galaxy library module is used to accomplish this task?

- A. juniper_junos_rpc
- B. juniper_junos_config
- C. juniper_junos_command
- D. juniper_junos_facts

Correct Answer: B

QUESTION 2

An XML schema definition file uses which extension?

- A. .tar
- B. .xml
- C. .xls
- D. .xsd

Correct Answer: D

Reference: <https://fileinfo.com/extension/xsd>

QUESTION 3

You want to restrict access to the REST API on a Junos device? What are two ways to accomplish this task? (Choose two.)

- A. Enable a maximum number of connections
- B. Restrict access by the source MAC address
- C. Restrict access by the source IP address
- D. Enable a schedule of specific access times

Correct Answer: CD

QUESTION 4

Which two statements are true about data structures? (Choose two.)

- A. YAML is human readable and supports serializing arbitrary native data structures
- B. YAML follows the lowest common denominator data types and requires simple processing between different programming environments
- C. JSON is language dependent, which uses conventions that are familiar to programmers of languages like C, C++, Java, Perl, and Python
- D. JSON is simple to generate and parse, though human readability is sacrificed

Correct Answer: AC

QUESTION 5

You are asked to update a PyEZ script that will check for errors when connecting or loading configurations on a Junos device.

Which two command statements should be added to the script to accomplish this task? (Choose two.)

- A. elseif statement
- B. try statement
- C. else statement
- D. except statement

Correct Answer: BD
