QUESTION 1

You are using Contrail as the SDN controller for your data center. You must ensure that Contrail provides DNS service to the VMs of a particular virtual network.

Which two DNS modes would accomplish this task? (Choose two.)

- A. tenant
- B. virtual DNS
- C. default
- D. reverse

Correct Answer: AB

QUESTION 2

What are two advantages of SDN? (Choose two.)

- A. centralized management
- B. decentralized management
- C. programmability
- D. static networking

Correct Answer: AC

QUESTION 3

You decide to create only host routes for each of your virtual networks in a project. Each virtual network is sent its correct host prefix. When troubleshooting inter-VN connectivity, using the ping command, the response times out between two virtual networks even though your policies allow for it.

What is the problem in this scenario?

- A. The VMs do not have interfaces.
- B. Using host routes prevents the default route from being sent.
- C. Your VMs have incorrect DNS settings.
- D. The IPAM settings are incorrect.

Correct Answer: C

QUESTION 4

Which statements correct about Contrail security?

- A. Contrail security is used to control access into Junos devices.
- B. Contrail security is used to apply security features and segment traffic flows.
- C. Contrail security is used to analyze network performance and learn traffic patterns.
- D. Contrail security is used to control management access to VNFs.

Correct Answer: B

QUESTION 5

What is the proper order for creating a virtual network?

- A. Configure the IPAM, virtual network, DNS, and then the virtual machine.
- B. Configure the DNS, IPAM, virtual network, and then the virtual machine.
- C. Configure the virtual network, DNS, IPAM, and then the virtual machine.
- D. Configure the IPAM, DNS, virtual network, and then the virtual machine.

Correct Answer: D
