### QUESTION 1

You are asked to deploy filter-based forwarding on your SRX Series device for incoming traffic sourced from the 10.10.100.0/24 network in this scenario, which three statements are correct? (Choose three.)

- A. You must create a forwarding-type routing instance.
- B. You must create and apply a firewall filter that matches on the source address 10.10.100.0/24 and then sends this traffic to your routing
- C. You must create and apply a firewall filter that matches on the destination address 10.10.100.0/24 and then sends this traffic to your routing instance.
- D. You must create a RIB group that adds interface routes to your routing instance.
- E. You must create a VRF-type routing instance.

Correct Answer: BCD

Explanation: In order to deploy filter-based forwarding on an SRX Series device for incoming traffic sourced from the 10.10.100.0/24 network, you must first create and apply a firewall filter that matches on the source address 10.10.100.0/24. Then, you must create a RIB group that adds interface routes to your routing instance and apply it. The filter will forward the traffic matching the source address to the routing instance. You don't need to create a forwarding-type routing instance or a VRF-type routing instance.

---

### QUESTION 2

You are asked to download and install the IPS signature database to a device operating in chassis cluster mode. Which statement is correct in this scenario?

- A. You must download and install the IPS signature package on the primary node.
- B. The first synchronization of the backup node and the primary node must be performed manually.
- C. The first time you synchronize the IPS signature package from the primary node to the backup node, the primary node must be rebooted.
- D. The IPS signature package must be downloaded and installed on the primary and backup nodes.

Correct Answer: D

---

### QUESTION 3

```

Which two statements are correct about the output shown in the exhibit? (Choose two.)

- A. The packet is silently discarded.
- B. The packet is part of an existing session.
- C. The packet is part of a new session.
- D. The packet is explicitly rejected.

Correct Answer: CD

#### QUESTION 4

You have the NAT rule, shown in the exhibit, applied to allow communication across an IPsec tunnel between your two sites with identical networks. Which statement is correct in this scenario?

- A. The NAT rule with translate the source and destination addresses.

- B. The NAT rule will only translate two addresses at a time.
- C. The NAT rule is applied to the N/A routing instance.
- D. 10 packets have been processed by the NAT rule.

Correct Answer: A

---

#### QUESTION 5

Your Source NAT implementation uses an address pool that contains multiple IPv4 addresses. Your users report that when they establish more than one session with an external application, they are prompted to authenticate multiple times. External hosts must not be able to establish sessions with internal network hosts.

What will solve this problem?

- A. Disable PAT.
- B. Enable destination NAT.
- C. Enable persistent NAT.
- D. Enable address persistence.

Correct Answer: D

Explanation: The solution to this problem is to enable address persistence. This will ensure that the same external IP address is used for multiple sessions between an internal host and an external host. This will result in only one authentication being required, as the same external IP address will be used for all sessions.
