QUESTION 1

You administer your company's Web site, which contains executable programs. You want to provide the highest level of trust to Internet users who download your programs, and you want to ensure that users' browsers will allow them to download the programs. Your company's network includes an enterprise root Certification Authority (CA) and an issuing enterprise subordinate CA.

Which of the following actions should you take?

- A. Request a Code Signing certificate from your company's enterprise subordinate CA.
- B. Request a Code Signing certificate from a commercial CA.
- C. Request a User Signature Only certificate from your company's enterprise subordinate CA.
- D. Request a User Signature Only certificate from a commercial CA.

Correct Answer: B

QUESTION 2

You are the server administrator for SRV05 which is a Windows Server Standard Edition file server in your domain. Your backup strategy utilizes one full backup and then daily differential backups. SRV05 has eight 72GB SCSI3 10,000RPM

drives in an external drive array for data and are set up using hardware RAID 5. SRV05 also has two additional 72GB SCSI3 10,000RPM drives internal to the system and they are configured in a RAID 1 arrangement. This volume holds the

system and boot partitions for the server's operating systems and a small amount of local application data.

The full back up is performed each Saturday at 9:00PM EST. The full back up takes 2 hours. The daily differential backups are performed each day at 9:00PM, Monday through Friday. There is no full backup nor differential backup performed

on Sunday. The amount of time needed for the differential backups varies but it is never less than 20 minutes and the maximum time never exceeds 75 minutes.

DNS07 has a hard disk failure in the external array at approximately 6:00PM on a Saturday. At 7:20PM a second drive in the external array also fails. What needs to be done to bring the server back to working order so that users can access

the data on the server?

Select the best answer.

- A. The failed drives need to be replaced and the data needs to be restored from the full backup.
- B. The failed drives need to be replaced and the data needs to be restored from the full backup and all of the differential backups.
- C. The failed drives need to be replaced. Nothing additional needs to be done because the RAID configuration allows

the system to continue to run.

D. The failed drives need to be replaced and the data needs to be restored from the full backup and the last differential backup.

Correct Answer: D

QUESTION 3

You have configured an RRAS server on one Windows Server computer and an IAS server on another, and configured the RRAS server to use the IAS server for authentication. In RADIUS terminology, which computer(s) are referred to as network access servers?

- A. The IAS server
- B. The RRAS servers
- C. The clients of the RRAS server
- D. Both the IAS and RRAS servers

Correct Answer: B

QUESTION 4

Your IT Director has been reading again. He has decided that he wants to convert the network to OSPF, but he is having some difficulty with terminology. He knows that an OSPF router can serve one of four roles. His problem is that he can't remember which role exists when one of the router's interfaces is on the backbone area. Help him out.

Which of the following is it?

- A. Internal router
- B. Area border router
- C. Backbone router
- D. Autonomous system boundary router

Correct Answer: C

QUESTION 5

You are implementing a new wireless network and need to change the default settings for the equipment on the WLAN. What information should you change? (Select all that apply.)

- A. SSID password
- B. SSID network name
- C. Domain Administrator password

D. Domain Administrator account should be renamed

Correct Answer: AB
