QUESTION 1

Mark works as a Network Administrator for ABC.com. The company has its headquarters at New York and a branch office at Miami. The headquarters has a Windows domain-based network named Nettech.com. The network has three Windows member servers and 120 Windows XP Professional client computers. One of the member servers named DNSServ is working as a DNS server.

The branch office in Miami also has a Windows domain-based network named Nettech1.com.

One Windows member server named DNSServ1 is working as a primary DNS server in Nettech1.com. DNSServ is a secondary zone server for Nettech1.com. Mark wants to monitor the notification traffic between these two domains and keep a record of when the primary DNS server for Nettech1.com informs DNSServ if there are available changes in the Nettech1.com zone. What will he do to accomplish this?

- A. Enable debug logging on DNSServ by selecting the Log packets for debugging check box and select the Notification check box.
- B. Configure auditing on DNSServ.
- C. Enable debug logging on DNSServ by selecting the Log packets for debugging check box.
- D. Execute the REPLMON command on DNSServ.

Correct Answer: A

QUESTION 2

You administer your company's network. A single-domain Active Directory forest is configured on the network. All servers run Windows Server.

The network contains a server named Server5 that hosts confidential business data. Access to Server5 must be restricted to only a few authorized personnel. You must ensure that those users, including designated Server5 administrators,

cannot share Server5's desktop with other users.

What should you do?

- A. Disable Remote Assistance in the local policy on Server5.
- B. Create a new OU, move Server5 to the OU, create a GPO that disables Remote Assistance, and link the GPO to the OU.
- C. Create a new OU, move Server5 to the OU, create a GPO that disables Remote Desktop, and link the GPO to the OU.
- D. Disable Remote Desktop in the local policy on Server5.
- E. Disable Remote Assistance in System Properties on Server5.
- F. Disable Remote Desktop in System Properties on Server5.

Correct Answer: B

QUESTION 3

Mark works as a Network Administrator for ABC.com. The company has a Windows single domain-based Active Directory network. The network has five Windows member servers and 200 Windows XP Professional client computers. The network has a Windows Server that works as a DNS server. The DNS server contains the following types of resource records: Name Server (NS) resource record A resource record PTR resource record SRV resource record MX resource record

Mark updates the A resource record. Which of the following types of resource records can be associated with the A resource record and needs to be updated?

- A. The associated PTR resource record needs to be updated.
- B. The associated SRV resource record needs to be updated.
- C. The associated MX resource record needs to be updated.
- D. The associated NS resource record needs to be updated.

Correct Answer: A

QUESTION 4

Jim is configuring the IP security policy for a computer running Windows Server.

Some of the client computers on the network are not IPSec aware, while others are. Jim wants all data to be encrypted and still allow those computers that do not support IPSec to authenticate.

Which of the following settings should he select? (Choose all that apply.)

- A. Server (request security)
- B. Client (request security)
- C. Client (respond only)
- D. Server Secure (require security)

Correct Answer: AC

QUESTION 5

You are working as an administrator for ABC.com. The network consists of a single Active Directory domain named ABC.com. All servers run Windows Server and all client computers run Windows XP Professional.

The ABC.com departments are organized into organizational units (OUs). The Administration OU is named ABC_ADMIN, and the Sales OU is named PABC_SALES. All file servers for all departments are located in their respective OUs. The ABC_SALES OU is a child OU of the ABC_ADMIN OU. A new ABC.com written security policy states that servers in the ABC_ADMIN OU should be highly secure. All communications with ABC-ADMIN servers

should be encrypted. The security policy also states that auditing should be enabled for

file and folder deletion on Sales servers. Communications with the Sales servers should not be encrypted. How should you configure Group Policy for the ABC_Admin and ABC_Sales OU? (Choose three.)

- A. Configure a GPO to apply the Hisecws.inf security template. Link this GPO to the ABC_ADMIN OU.
- B. Configure a GPO to enable the Audit object access audit policy on computer objects. Link this GPO to the ABC_SALES OU.
- C. Configure a GPO to apply the Hisecws.inf security template. Link this GPO to the ABC_Sales OU.
- D. Configure a GPO to enable the Audit object access audit policy on computer objects. Link this GPO to the ABC_ADMIN OU.
- E. Block group policy inheritance on the ABC_ADMIN OU.
- F. Block group policy inheritance on the ABC_SALES OU.

Correct Answer: ABF
