### QUESTION 1

A merchant states the downtime during the deployment phase is too long. After analysis, it is determined the static content deployment is the longest process. Static content needs to be available immediately after deployment.

How can the static content deployment time be reduced?

- A. Move static content deploy to the build phase
- B. Commit var/view\_preprocessed to git so it already exists during the deployment phase
- C. Set stage/global/SKIP\_SCD to true
- D. Reduce the number of store views per website

Correct Answer: A

---

### QUESTION 2

A project has a Magento cron job implemented to export new order data to a file. This process can also be triggered by a custom bin/magento command. The functionality uses a lock file in var/locks to prevent concurrent execution.

There are instances when the process gets locked after Production deployments and order data is not exported.

How do you prevent this from happening?

- A. Use the VAR\_LOCKS\_CLEAR variable available for the post\_deploy stage in the .magento.env.yaml file
- B. Write a custom post\_deploy hook to delete orphan lock files and include it in the .magento.app.yaml file
- C. Use the VAR\_LOCKS\_CLEAR variable available for the build stage in the .magento.app.yaml file
- D. You must access the Production environment and delete the lock file

Correct Answer: A

---

### QUESTION 3

In a Pro plan project, you notice there is a mail delivery problem in the Integration environment.

How do you troubleshoot this?

- A. Change the log level in the log:email section of the .magento.env.yaml file
- B. Update the SPF record in the DNS
- C. Look in the var/log directory for the mail.log file

D. Move the test to the Staging environment

Correct Answer: D

---

#### QUESTION 4

You created a custom module that is not functioning as expected on your Integration environment. You would like to debug the code using Xdebug. Xdebug is missing from the output of the command `php -m`.

What are two ways to load the Xdebug module? (Choose two.)

- A. Create a custom `php.ini` that includes the extension
- B. You log a support request as PHP modules can only be installed by support
- C. Add `xdebug` into the `.magento.app.yaml` file under the extensions section
- D. In the `phpserver` folder, create a folder `conf.d` and add a file `ext-xdebug.ini` that includes the extension

Correct Answer: AC

---

#### QUESTION 5

You have a Starter project. Your code is ready for testing in the Staging environment, but you need the latest data from Production.

What do you do to update the Staging environment?

- A. Log in to the Project Web UI, choose the Staging environment, and click Sync
- B. Log in to the Project Web UI, choose the Staging environment, and click Merge
- C. Checkout the Staging branch and use the `git push origin -f` command
- D. Checkout the Production environment and use the `magento-cloud sync` CLI command

Correct Answer: B
