### QUESTION 1

You created a custom module that is not functioning as expected on your Integration environment. You would like to debug the code using Xdebug. Xdebug is missing from the output of the command `php -m`.

What are two ways to load the Xdebug module? (Choose two.)

- A. Create a custom `php.ini` that includes the extension
- B. You log a support request as PHP modules can only be installed by support
- C. Add `xdebug` into the `.magento.app.yaml` file under the extensions section
- D. In the `phpserver` folder, create a folder `conf.d` and add a file `ext-xdebug.ini` that includes the extension

Correct Answer: AC

---

### QUESTION 2

A project has a Magento cron job implemented to export new order data to a file. This process can also be triggered by a custom `bin/magento` command. The functionality uses a lock file in `var/locks` to prevent concurrent execution.

There are instances when the process gets locked after Production deployments and order data is not exported.

How do you prevent this from happening?

- A. Use the `VAR_LOCKS_CLEAR` variable available for the `post_deploy` stage in the `.magento.env.yaml` file
- B. Write a custom `post_deploy` hook to delete orphan lock files and include it in the `.magento.app.yaml` file
- C. Use the `VAR_LOCKS_CLEAR` variable available for the `build` stage in the `.magento.app.yaml` file
- D. You must access the Production environment and delete the lock file

Correct Answer: A

---

### QUESTION 3

You have a project deploying Static Content on the deploy phase. This process is optimized using the `SCD_MATRIX` configuration in the `deploy` stage of the `.magento.env.yaml` file.

After moving the process to the build phase, Static Content Deployment is no longer optimized and all themes and all locales are generating.

How do you resolve this?

- A. The `SCD_MATRIX` configuration is only used on the deploy phase
- B. Add the `--use_scd_matrix` flag to the `ece-tools build:generate` command in the `.magento.app.yaml` file
- C. Move the `SCD_MATRIX` configuration to the build stage of the `.magento.env.yaml` file

D. Configure the variable ENABLE\_SCD\_MATRIX in the .magento.env.yaml file

Correct Answer: C

---

#### QUESTION 4

You have created a new Integration branch and did not receive the administrator email with the password reset link.

What is prohibiting the email from sending?

- A. You have not enabled the Magento Email module with bin/magento module:enable
- B. The Outgoing Emails setting is disabled under Environment Settings in the Project Web UI
- C. Email is always disabled on all integration branches
- D. You have not configured SendGrid for this environment

Correct Answer: B

---

#### QUESTION 5

In a Pro plan project, you notice there is a mail delivery problem in the Integration environment.

How do you troubleshoot this?

- A. Change the log level in the log:email section of the .magento.env.yaml file
- B. Update the SPF record in the DNS
- C. Look in the var/log directory for the mail.log file
- D. Move the test to the Staging environment

Correct Answer: D
