QUESTION 1

A warehouse uses mobile devices for locating products.

Products are listed in the Inventory module in incorrect locations. Users must therefore manually locate products to be picked.

You need to ensure that the users\' mobile device updates ^locations of the products.

Which two actions should you take to update product locations by using the mobile devices?

Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Scan a shelf barcode and update the inventory.
- B. Manually find the physical location of the product.
- C. Log into a desktop computer and update the Inventory module
- D. Manually move product to the correct physical location

Correct Answer: AD

QUESTION 2

A company plans to run their profit and loss statements by using the site storage dimension.

If the site is changed on sales order, purchase order, or other source document, a mismatch is created between financial and storage dimensions. This leads to incorrect profit and loss reporting.

You need to ensure that the financial dimension updates when the site storage dimension changes.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Lock the dimension link.
- B. Associate the financial dimension hierarchy with the storage dimension hierarchy in the organization chart.
- C. On the storage dimension site setup screen, select Default inventory status ID.
- D. Associate the site storage dimension with the site financial dimension.
- E. Activate the dimension link.

Correct Answer: ADE

QUESTION 3

A company uses Dynamics 365 Supply Chain Management and the FIFO valuation method for inventory.

The company's warehouse experienced a roof leak. The leak caused damage to items in the warehouse. Accounting must know the total cost of inventory that is damaged but does not want the damaged items removed from inventory until they have been inspected.

You need to meet the requirements of the accounting department.

Which two features should you use? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Stop item for inventory transactions
- B. Movement journal
- C. Order holds
- D. Location profile
- E. Inventory status

Correct Answer: AE

Explanation:

E: An inventory status is one of the dimensions in the storage dimension group. Inventory statuses can be categorized as available or unavailable, and you can use the Inventory blocking parameter to block items that have an unavailable inventory status. Items that have a blocked status are considered physical inventory, and they can't be used on a production order, sales order, transfer order, or outbound transaction.

You can use warehouse items that have either available or unavailable inventory statuses for inbound work. For example, you create an available status that is named Ready, an unavailable status that is named Damaged, and a blocked status that is named Blocked.

When you create a purchase order for received or returned items, if any items are damaged or broken, you can change the inventory status of those items to Damaged on the purchase order line. After these items are received, the status is automatically set to Blocked.

A: Blocking items by using inventory status blocking You can specify which inventory statuses are blocking statuses by using the Inventory blocking parameter on the Inventory statuses page. You can't use inventory statuses as blocking statuses for production orders, sales orders, transfer orders, outbound transactions, or project integrations. For outbound work, use items that have an available inventory status. If items have a status of Broken, and master planning is run on those items, the items are considered missing, and inventory is automatically replenished.
