QUESTION 1

You need to configure the system to meet the order requirements for unscented cleaning solution.

Which three actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Add the ingredients for unscented cleaning solution to a regulated products inclusion list.
- B. On the inventory management parameters, set the value for the Print Product Safety Data Sheet and Prevent Sales Pack Slip/Invoice Posting to TRUE.
- C. In Document Handling, associate the PSDS file with the PSDS record and set restriction field set to Internal.
- D. Configure the ingredient as a restricted and regulated product.
- E. Ensure that the PSDS file is active and within the expiration date requirements.

Correct Answer: ABE

A: Regulated items are identified once they are listed as a regulated item. It is common that material may be regulated in just certain regions, countries, or states. Therefore, the restricted items are entered for each region. If items are not on a Regional regulated item list, they are assumed to be not regulated. This list can be accessed either through Inventory management or the released products form.

B: The inventory parameters (path: Inventory management Setup> Inventory and warehouse management parameters) allow you to govern the rules in the management of the product safety data sheet. These parameters are stored in an exclusive Product compliance section and are set within each legal entity. In this form you can outline:

*

Whether to automatically print safety data sheets when shipping.

*

Etc.

E: Expiry advice defines the number of days before the expiration date of product safety data sheets that the system should begin presenting messages.

Requirements, Liquid cleaning solution manufacturing, include:

An ingredient used to manufacture unscented cleaning solution is defined as a restricted product. You must be able to automatically print a product safety data sheet (PSDS) with the packing slip for any order that includes unscented cleaning

solution.

QUESTION 2

You need to set up the configuration model to price the motorcycles correctly. What should you do?

- A. Set Order type in price model to Sales Order and Pricing method in Version to Attribute based
- B. Set Order type in price model to Sales Order and Pricing method in Version to Cost based.
- C. Set Order type in price model to Sales Quotation and Pricing method in Version to Attribute based.
- D. Set Order type in price model to Sales Quotation and Pricing method in Version to Cost based

Correct Answer: A

QUESTION 3

A company configures master planning to order large and expensive aluminum sheets that are only available at certain times of the year.

The warehouse manager reports that replenishment levels are too high, causing inventory value to be over budget. In addition, the aluminum sheets take up too much space on the shop floor.

You need to configure the appropriate replenishment method.

Which coverage dimension should you use?

- A. Min/Max
- B. Per period
- C. Per requirement
- D. Manual

Correct Answer: B

Period ?The replenishment method combines all the demand for a period into one order for the product. The order will be planned for the first day of the period, and its quantity will fulfill the net requirements during the established period. The period starts with the first demand of the product and covers the defined length of time. The next period will start with the next requirements of the product. The Period coverage code is often used for non-predictable inventory draw, season-influenced products, or high-cost products.

Incorrect:

*

Min./Max. ?The replenishment method is based on the inventory level. It defines the replenishment of inventory up to a specific level when the predicted on-hand level is below a specific threshold. The replenishment quantity will be the

difference between the maximum level and the predicted on-hand level. The Min./Max. coverage code is often used for predictable inventory draw, high runners, or less expensive products.

*

Manual ?In the replenishment method, the system doesn't suggest purchase, transfer, or production orders for the product. Instead, the planner for the product is responsible for creating the required orders for the replenishment of the product. The Manual coverage code is often used for products that system-generated planned orders aren't wanted for.

*

Requirement ?In the replenishment method, the system creates a planned purchase, transfer, or production order per requirement for the product. This method is used for expensive products that have intermittent demand. The Requirement

coverage code is often used for configurable products or make-to-order scenarios.

QUESTION 4

You need to configure the manufacturing groups for the standard model bicycle and the new limited-edition bicycle for the summer season. Which object should you use?

- A. Operating units
- B. Departments
- C. Commerce channels
- D. Legal entities
- E. Teams

Correct Answer: A

The standard model and limited-edition bicycle teams are separate operating units within the manufacturing division. Financials are tracked and reported separately even though they are produced and sold in the same sales channels.

QUESTION 5

A manufacturing plant uses Lean process. You plan to outsource a painting operation to a subcontracting vendor. You create a service item named SP-01 to represent the painting service.

You need to create a subcontracting activity for the painting service.

Solution:

- 1.) Create a vendor warehouse for the subcontracting vendor
- 2.) Create a vendor resource and add it to a new work cell for outsource painting
- 3.) Create a production flow transfer activity and specify the vendor warehouse as the target warehouse

Does this solution meet the goal?

A. Yes

B. No

Correct Answer: B
