### QUESTION 4

A company plans to upgrade from Microsoft Dynamics AX 2012 to Dynamics 365 Finance and Dynamics 365 Supply Chain Management. The company has a large call center that uses a third-party system to enter sales orders.

The company decides to keep the third-party system and integrate it with Dynamics 365 Finance and Dynamics 365 Supply Chain Management.

The company also wants to reuse the Microsoft Dynamics AX 2012 integration and endpoints with Dynamics 365 Finance and Dynamics 365 Supply Chain Management.

For performance reasons, non-real-time integrations must be avoided.

All solutions that are proposed should be supported by Microsoft in case there are performance issues.

You need to plan the integration strategy.

What should you do?

- A. Prioritize technical requirements over functional requirements.
- B. Plan for testing in a production environment.
- C. Plan for testing in a Tier 2+ environment.
- D. Reuse the Application Integration Framework (AIF) and endpoint integration.

Correct Answer: D

Custom service development

You can develop custom services for finance and operations. When a developer writes a custom service under a service group, the service group is always deployed on two endpoints:

SOAP endpoint

JSON endpoint

SOAP-based custom service

SOAP-based services remain the same as they were in Dynamics AX 2012.

For this question there are the correct answers:

\*

Define custom service API requirements

\*

Reuse the Application Integration Framework (AIF) and endpoint integration. For this question there are the incorrect answers:

\*

Plan for testing in a production environment.

\*

Plan for testing in a Tier 2+ environment.

\*

Prioritize technical requirements over functional requirements.

\*

Use the Microsoft Excel add-in.
