QUESTION 1

You are using the Visual Studio development environment to perform a customization for your client. You need to synchronize project elements related to the data dictionary along with the build operation. Where should you set the property "Synchronize database on Build" to achieve this goal?

- A. package properties
- B. individual data dictionary element properties
- C. project properties
- D. model properties

Correct Answer: D

QUESTION 2

You are developing a form that allows users to update an order status. You create a table named Table1 that you will use as a data source for this form.

You want to include a radio-button style selection so that the end user can choose between three different order statuses: "Canceled", "Delivered", "Processing".

What should you add to Table1 so that you can add the radio button selection to the form?

- A. three different string fields that represent each order status
- B. three different Extended Data Types (EDTs) of type string with each order status
- C. a Boolean data type with values that represent each choice
- D. a base enumeration with three elements that represent each order status

Correct Answer: A

QUESTION 3

You have two classes written in X++ with the following code:

You have two classes written in X++ with the following code:

```
class DirParty
{
    string getContactInfo(LogisticsLocationRecId _location)
    {
        //-----
    }

    server static boolean addLocation()
    {
        //-----
    }

    client private static void addLocationClient()
    {
        //-----
    }

    private void update()
    {
        //-----
    }

    protected void duplicateCurrentParty()
    {
        //-----
    }
}

class DirParty_Person extends DirParty
{
    public void write()
    {
        // to be implemented
    }
}
```

Which three methods of the DirParty class are accessible from the Write method? (Each correct answer presents a complete solution.)

- A. duplicateCurrentParty()
- B. addLocation()
- C. update()
- D. getContactInfo()
- E. add LocationClientO

Correct Answer: ABD

QUESTION 4

You plan to create two tables Table1 and Table2. Both tables will have a field of type string that has a length of 15 and is named Customer Number. The tables will have a relation on the Customer Number field.

You need to ensure that the string length of Customer Number is identical in both tables. The solution must ensure that if any relations on the Customer Number field are added to other tables, the additional tables will have the same string length for Customer Number.

What should you use?

- A. an index
- B. a class
- C. an extended data type
- D. a base enumeration

Correct Answer: A

QUESTION 5

You need to present best practices for creating and managing labels to the development team.

What are three accepted best practices for labels? Each correct answer presents a complete solution

- A. Ensure that labels have correct translation.
- B. Create new labels for each new version of an element
- C. Create static labels and generate label files after the project is complete.
- D. Use labels when programming for all external strings.
- E. Use labels for every element or artifact.

Correct Answer: ABC
