What is the most appropriate test for him?

- A. Ophthalmoscopy
- B. Checking red reflex
- C. Thyroid function test
- D. Visual field test

Correct Answer: B

This is a wrong key. Right key should be D. CT. A case of 3rd nerve palsy. So to cause CT should be done. Red reflex is seen to diagnose cataract.

QUESTION 2

A patient with gross hematuria after blunt abdominal trauma has a normal appearing cystogram after the intravesical instillation of 400 ml of contrast. You should next order:

- A. A retrograde urethrogram.
- B. A voiding cystourethrogram.
- C. A cystogram obtained after filling, until a detrusor response occurs
- D. An intravenous pyelogram.

Correct Answer: A

QUESTION 3

A 42-year-old man presents with a target shaped rash that has developed over the last several days. He was on a camping trip in the woods last week in Maine.

What is the next best step in management?

- A. Western blot
- B. Doxycycline E-Ceftriaxone
- C. ELISA
- D. Serology for IgM

Correct Answer: B

A rash suggestive of Lyme is enough to indicate treatment. A 5-cm-wide targetshaped rash, particularly with a history of camping/hiking, is enough to indicate the need for antibiotic treatment with doxycycline. A characteristic rash is more specific than serology.

QUESTION 4

A patient presented to you who is known case of hypothyroidism and on thyroxin, he also has increase PT normal Vitamin D, Creatinine is very high.
