QUESTION 4

You have a Microsoft 365 subscription.

You use app protection policies to protect corporate data on Android devices.

You need to ensure that any user connecting from an Android device can only access the corporate data if they connect from an app that supports mobile application management (MAM).

What should you configure?

A. an app configuration policy

B. a Conditional Access policy

C. a device configuration profile

D. a device compliance policy

Correct Answer: B

Mobile Application Management (MAM)

Common Conditional Access policy: Require approved client apps or app protection policy

In Conditional Access policy, you can require that an Intune app protection policy is present on the client app before access is available to the selected applications. These mobile application management (MAM) app protection policies allow

you to manage and protect your organization\'s data within specific applications.

To apply this grant control, Conditional Access requires that the device is registered in Microsoft Entra ID, which requires using a broker app. The broker app can be either Microsoft Authenticator for iOS or Microsoft Company Portal for

Android devices. If a broker app isn\'t installed on the device when the user attempts to authenticate, the user is redirected to the app store to install the broker app. App protection policies are generally available for iOS and Android, and in

public preview for Microsoft Edge on Windows
