QUESTION 1

You have a Microsoft 365 E5 tenant that contains 100 Windows 10 devices.

You plan to deploy a Windows 10 Security Baseline profile that will protect secrets stored in memory. What should you configure in the profile?

- A. Microsoft Defender Credential Guard
- B. BitLocker Drive Encryption (BitLocker)
- C. Microsoft Defender
- D. Microsoft Defender Exploit Guard

Correct Answer: A

QUESTION 2

You have a hybrid Azure Active Directory (Azure AD) tenant and a Microsoft Endpoint Configuration Manager deployment. You have the devices shown in the following table.

Name	Platform	Configuration
Device1	Windows 10	Hybrid joined to on-premises Active Directory and Azure AD only
Device2	Windows 10	Joined to Azure AD and enrolled in Configuration Manager only
Device3	Windows 10	Enrolled in Microsoft Endpoint Manager and has the Configuration Manager agent installed only

You plan to enable co-management.

You need to identify which devices support co-management without requiring the installation of additional software.

Which devices should you identify?

- A. Device1 only
- B. Device2 only
- C. Device3 only
- D. Device2 and Device3 only
- E. Device1, Device2, and Device3

Correct Answer: D

QUESTION 3

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the objects shown in the following table.

Name	Configuration
Group1	Global security group
User1	Enabled user account
User2	Disabled user account

You configure Azure AD Connect to sync contoso.com to Azure AD. Which objects will sync to Azure AD?

- A. Group1 only
- B. User1 and User2 only
- C. Group1 and User1 only
- D. Group1, User1, and User2

Correct Answer: D

Disabled accounts Disabled accounts are synchronized as well to Azure AD. Disabled accounts are common to represent resources in Exchange, for example conference rooms. The exception is users with a linked mailbox; as previously mentioned, these will never provision an account to Azure AD.

The assumption is that if a disabled user account is found, then we won't find another active account later and the object is provisioned to Azure AD with the userPrincipalName and sourceAnchor found. In case another active account will join to the same metaverse object, then its userPrincipalName and sourceAnchor will be used.
