QUESTION 1

HOTSPOT

You have a Microsoft 365 subscription.

You need to ensure that users accessing files in Microsoft SharePoint Online from an unmanaged device can only view the files in a browser.

How should you complete the command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

<ul style="list-style-type: none"> Set-SPOSite Set-SPOTenant Set-SPOTenantCdnPolicy 	<ul style="list-style-type: none"> -ConditionalAccessPolicy -PermissiveBrowserFileHandlingOverride -SharingDomainRestrictionMode 	<ul style="list-style-type: none"> AllowFullAccess AllowLimitedAccess BlockAccess

Correct Answer:

Answer Area

<ul style="list-style-type: none"> Set-SPOSite <li style="background-color: #e0ffe0;">Set-SPOTenant Set-SPOTenantCdnPolicy 	<ul style="list-style-type: none"> <li style="background-color: #e0ffe0;">-ConditionalAccessPolicy -PermissiveBrowserFileHandlingOverride -SharingDomainRestrictionMode 	<ul style="list-style-type: none"> AllowFullAccess <li style="background-color: #e0ffe0;">AllowLimitedAccess BlockAccess

QUESTION 2

You have a SharePoint Server farm.

You need to ensure that a user named User1 can apply style sheets and override list behaviors. The solution must use the principle of least privilege.

Which permission best achieves the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Edit
- B. Full Control
- C. Design
- D. Limited Access

Correct Answer: C

QUESTION 3

You have a SharePoint Server farm and a Microsoft 365 subscription.

You plan to deploy the On-premises data gateway.

Which three cloud services can use the gateway to access SharePoint data? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Microsoft StaffHub
- B. Microsoft PowerApps
- C. Microsoft Power BI
- D. Microsoft Planner
- E. Microsoft Flow

Correct Answer: BDE

QUESTION 4

You have a SharePoint Server farm.

You configure the farm to support custom tiles, and you add an item to the custom tiles list. You open a web browser and discover that the new item does not appear in the app launcher. You need to ensure that the tile appears immediately in

the app launcher.

What should you do?

- A. From the developer tools of the web browser, run the `ClearSuiteLinksCache()` function.
- B. From the developer tools of the web browser, run `applicationCache.swapCache`.
- C. Call the `Update()` method of the website by using PowerShell.
- D. Increase the Title Order value associated to the custom title.

Correct Answer: A

QUESTION 5

You have a Microsoft 365 subscription.

All users are managed from an on-premises Active Directory domain. Users access Microsoft Teams by using pass-through authentication.

Which identity model is used to access Teams?

- A. Synchronized Identity
- B. Federated Identity
- C. Cloud Identity
- D. MFA for Office 365

Correct Answer: C

Cloud Identity: In this model, a user is created and managed in Office 365 and stored in Azure Active Directory, and the password is verified by Azure Active Directory

Note: Azure Active Directory (Azure AD) Pass-through Authentication allows your users to sign in to both on-premises and cloud-based applications using the same passwords. This feature provides your users a better experience - one less password to remember, and reduces IT helpdesk costs because your users are less likely to forget how to sign in. When users sign in using Azure AD, this feature validates users' passwords directly against your on-premises Active Directory.

Incorrect Answers:

A: Synchronized Identity: In this model, the user identity is managed in an on-premises server, and the accounts and password hashes are synchronized to the cloud. The user enters the same password on-premises as they do in the cloud, and at sign-in the password is verified by Azure Active Directory. This model uses the Microsoft Azure Active Directory Connect Tool.

B: Federated Identity: This model requires a synchronized identity with the user password is verified by the on-premises identity provider. With this model, the password hash does not need to be synchronized to Azure AD, and Active Directory Federation Services (ADFS) or a third-party identity provider is used to authenticate users against the on-premises Active Directory.

D: Office 365 plans support Multi-Factor Authentication (MFA) that increases the security of user logins to Office 365 services. With MFA for Office 365, users are required to acknowledge a phone call, text message, or an app notification on their smartphone after correctly entering their password. Only after this second authentication factor has been satisfied, can a user sign in.
