### QUESTION 1

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are developing a new application named App1 that uses the Microsoft identity platform to authenticate to Azure Active Directory (Azure AD).

Currently, App1 can read user profile information.

You need to allow App1 to read the user's calendar.

Solution: From the Azure portal, edit the API permission list for App1. Add the Microsoft Graph API and the Calendars.Read permissions and then grant tenant admin consent.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

Microsoft Graph Calendars.Read allows the app to read events in user calendars.

For your app to access data in Microsoft Graph, the user or administrator must grant it the correct permissions via a consent process.

Application permissions are used by apps that run without a signed-in user present; for example, apps that run as background services or daemons. Application permissions can only be consented by an administrator.

---

### QUESTION 2

You are developing a new application named App1 that uses the Microsoft identity platform to authenticate to Azure Active Directory (Azure AD).

Currently, App1 can read user profile information.

You need to allow App1 to read the user's calendar.

Solution: Add <https://graph.windows.net/user.read> to the list of scopes during the initial login request.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Microsoft Graph Calendars.Read allows the app to read events in user calendars. For your app to access data in Microsoft Graph, the user or administrator must grant it the correct permissions via a consent process. Application permissions are used by apps that run without a signed-in user present; for example, apps that run as background services or daemons. Application permissions can only be consented by an administrator. References:

### QUESTION 3

#### HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select NO. NOTE: Each correct selection is worth one point.

Hot Area:

Statements	Yes	No
Search-based messaging extensions can query a third-party service and show the information on a card.	<input type="radio"/>	<input type="radio"/>
Search-based messaging extensions can use the Bot Framework to interact with third-party applications.	<input type="radio"/>	<input type="radio"/>
Search-based messaging extensions can be used to display information on a tab.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Statements	Yes	No
Search-based messaging extensions can query a third-party service and show the information on a card.	<input type="radio"/>	<input checked="" type="radio"/>
Search-based messaging extensions can use the Bot Framework to interact with third-party applications.	<input type="radio"/>	<input checked="" type="radio"/>
Search-based messaging extensions can be used to display information on a tab.	<input checked="" type="radio"/>	<input type="radio"/>

### QUESTION 4

#### DRAG DROP

Match the SharePoint Framework (SPFx) extensions to the correct descriptions.

To answer, drag the appropriate SPFx extension from the column on the left to its description on the right. Each SPFx extension may be used once, more than once, or not at all.

NOTE Each correct match is worth one point.

Select and Place:

**SPFx Extensions**

- Application Customizers
- Command sets
- Field Customizers

- SPFx extension Used to change the look and feel of a page library's view.
- SPFx extension Used to create custom actions for a page library used by authors
- SPFx extension Used to add scripts to a page and extend HTML element placeholders

Correct Answer:

**SPFx Extensions**

- 
- 
- 

- Command sets Used to change the look and feel of a page library's view.
- Field Customizers Used to create custom actions for a page library used by authors
- Application Customizers Used to add scripts to a page and extend HTML element placeholders

Application Customizers: Adds scripts to the page, and accesses well-known HTML element placeholders and extends them with custom renderings. Field Customizers: Provides modified views to data for fields within a list. Command Sets: Extends the SharePoint command surfaces to add new actions, and provides client-side code that you can use to implement behaviors.

**QUESTION 5**

This question requires that you evaluate the underlined text to determine if it is correct.

In Microsoft Word on Windows, before you can sideload a Microsoft Office Add-in. you must first upload the manifest to Microsoft\_pnePrivc.

Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed." If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed.
- B. deploy the manifest to an Azure website
- C. publish the manifest to a trusted network location
- D. set Microsoft Edge to Developer Mode

Correct Answer: A
