QUESTION 1

What is true about where an API policy is defined in Anypoint Platform and how it is then applied to API instances?

- A. The API policy is defined in Runtime Manager as part of the API deployment to a Mule runtime, and then ONLY applied to the specific API instance.
- B. The API policy is defined in API Manager for a specific API instance, and then ONLY applied to the specific API instance.
- C. The API policy is defined in API Manager and then automatically applied to ALL API instances.
- D. The API policy is defined in API Manager, and then applied to ALL API instances in the specified environment.

Correct Answer: B

QUESTION 2

A System API is designed to retrieve data from a backend system that has scalability challenges.

What API policy can best safeguard the backend system?

- A. IP whitelist
- B. SLA-based rate limiting
- C. OAuth 2 token enforcement
- D. Client ID enforcement

Correct Answer: A

QUESTION 3

When using CloudHub with the Shared Load Balancer, what is managed EXCLUSIVELY by the API implementation (the Mule application) and NOT by Anypoint Platform?

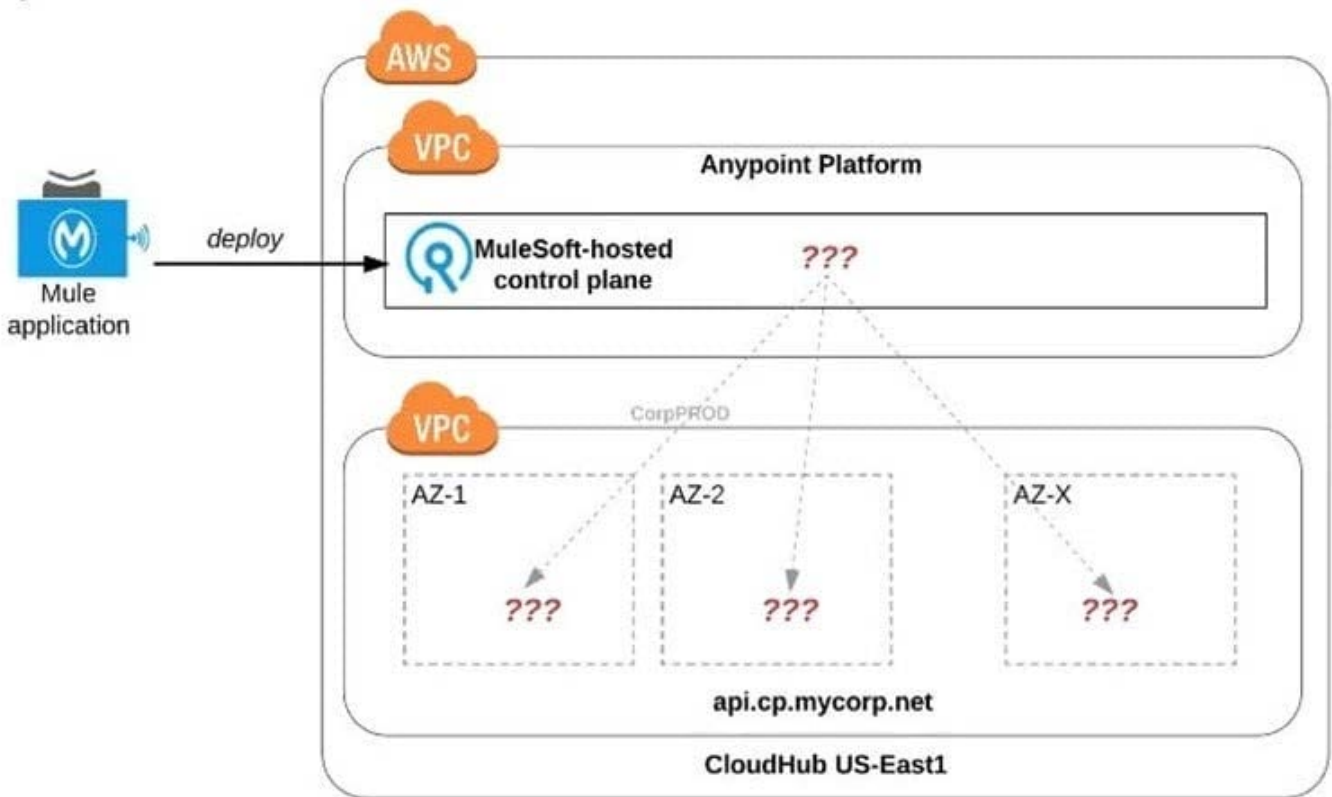

- A. The assignment of each HTTP request to a particular CloudHub worker
- B. The logging configuration that enables log entries to be visible in Runtime Manager
- C. The SSL certificates used by the API implementation to expose HTTPS endpoints
- D. The number of DNS entries allocated to the API implementation

Correct Answer: A

QUESTION 4

Refer to the exhibit.

An organization uses one specific CloudHub (AWS) region for all CloudHub deployments.

How are CloudHub workers assigned to availability zones (AZs) when the organization's Mule applications are deployed to CloudHub in that region?

- A. Workers belonging to a given environment are assigned to the same AZ within that region.
- B. AZs are selected as part of the Mule application's deployment configuration.
- C. Workers are randomly distributed across available AZs within that region.
- D. An AZ is randomly selected for a Mule application, and all the Mule application's CloudHub workers are assigned to that one AZ.

Correct Answer: D

QUESTION 5

When must an API implementation be deployed to an Anypoint VPC?

- A. When the API implementation must invoke publicly exposed services that are deployed outside of CloudHub in a customer-managed AWS instance.
- B. When the API implementation must be accessible within a subnet of a restricted customer-hosted network that does

not allow public access.

C. When the API implementation must be deployed to a production AWS VPC using the Mule Maven plugin

D. When the API implementation must write to a persistent Object Store

Correct Answer: A
