QUESTION 1

Some visitors are unable to access the wireless network. The network's wireless infrastructure is comprised of three different buildings with the configurations listed below. Wireless network in Building A and C is used exclusively for internal employees and Building B is used for visitors and requires no additional configuration on their devices. Which of the following settings would need to be modified to provide wireless access to all visitors?

Building A Channel: 2 Encryption: WPA2
Building B Channel: 6 Encryption: WPA2
Building C Channel: 11 Encryption: WPA2

- A. Encryption set to Open in all Buildings
- B. Encryption set to Open in Building B
- C. Encryption set to WEP in Building B
- D. Channel set to 11 in Building B

Correct Answer: B

Explanation: Because the building B is in the middle, the wireless access router will have reachability to the building A and C. Now, the only thing that we need to do is to open the Wireless access on B for the guest users for the WAP in B so that the users coming to building A and C can get access to internet using the open connection.

QUESTION 2

A technician is sorting patch cables into four bins labeled coaxial, crossover, straight-through, and fiber. The technician has a cable with RJ-45 ends. The wires at one end of the cable start with an orange-white wire, while the wires at the other end of the cable start with a green wire. Into which of the following bins should this cable be placed?

- A. Crossover
- B. Fiber
- C. Straight-through
- D. Coaxial

Correct Answer: A

QUESTION 3

A SOHO office recently installed a wireless network for employees to use during lunch breaks. As such, the access point was placed in the kitchen area by the microwave. Employees have been reporting intermittent connectivity when using the wireless network. Which of the following would BEST improve connectivity?

- A. Disable SSID broadcast
- B. Increase the signal strength
- C. Move the access point

D. Change the broadcast channel

Correct Answer: C

QUESTION 4

An outside technician notices that a SOHO employee who is logged into the company VPN has an unexpected source IP address. Which of the following is the employee MOST likely using?

- A. Proxy server
- B. Least-cost routing
- C. IPv6
- D. VPN concentrator

Correct Answer: A

QUESTION 5

A system administrator has been tasked to ensure that the software team is not affecting the production software when developing enhancements. The software that is being updated is on a very short SDLC and enhancements must be developed rapidly. These enhancements must be approved before being deployed. Which of the following will mitigate production outages before the enhancements are deployed?

- A. Implement an environment to test the enhancements.
- B. Implement ACLs that only allow management access to the enhancements.
- C. Deploy an IPS on the production network.
- D. Move the software team's workstations to the DMZ.

Correct Answer: A

Environments are controlled areas where systems developers can build, distribute, install, configure, test, and execute systems that move through the Software Development Life Cycle (SDLC). The enhancements can be deployed and tested in a test environment before they are installed in the production environment.
