QUESTION 1

A network technician is diligent about maintaining all system servers at the most current service pack level available. After performing upgrades, users experience issues with server-based applications. Which of the following should be used to prevent issues in the future?

- A. Configure an automated patching server
- B. Virtualize the servers and take daily snapshots
- C. Configure a honeypot for application testing
- D. Configure a test lab for updates

Correct Answer: D

To prevent the service pack issues make sure, before going ahead and applying a new Service Pack in your production environment, to validate them in a test/lab environment first.

QUESTION 2

A technician installs a new CAT6 cable from one end of the office building to another, a total distance of 600 feet (182.88 meters). When a laptop is connected to the cable, it cannot connect to the Internet. Which of the following is MOST likely the cause of this problem?

- A. Bad connectors
- B. Crosstalk
- C. DB loss
- D. TXRX reversed

Correct Answer: C

QUESTION 3

A technician has been given the task to install a wireless network in a user's home. Which of the following should the technician consider when implementing the network? (Select TWO).

- A. That there is strong encryption enabled and configured on the access point.
- B. The user's home network has a correctly completed WHOIS entry.
- C. The access point is broadcasting the SSID based upon manufacturer's standards.
- D. There are no conflicts of channels in use by neighboring wireless networks.
- E. There are redundant internal DNS names set in the access point's settings.
- F. That the access point's MAC address is properly set in its configuration settings.

Correct Answer: AD

Explanation: Strong encryption is required to keep the user's internet safe and secure so as to avoid misuse of the internet connection and to ensure that channel conflicts are not there so that the signals do not compete with each other and user start to face intermittent connection.

QUESTION 4

A user calls the helpdesk to report not being able to access network resources over the company's Wi-Fi connection. During information gathering, the user mentions that the wireless network their computer is signed into is not the same name as it had been previously. Which of the following is the underlying cause?

- A. SSID mismatch
- B. Incorrect WPA key
- C. Signal bounce
- D. Antenna placement

Correct Answer: A

QUESTION 5

A technician wants to configure the inbound port of a router to prevent FTP traffic from leaving the LAN. Which of the following should be placed on the router interface to accomplish this goal?

- A. Static routes for all port 80 traffic
- B. DHCP reservations for all /24 subnets
- C. ACL for ports 20 and 21
- D. MAC filtering using wildcards

Correct Answer: C
