### QUESTION 1

A user in a branch office reports that access to all files has been lost after receiving a new PC. All other users in the branch can access fileshares. The IT engineer who is troubleshooting this incident is able to ping the workstation from the branch router, but the machine cannot ping the router. Which of the following is MOST likely the cause of the incident?

- A. Incorrect subnet mask
- B. Incorrect DNS server
- C. Incorrect IP class
- D. Incorrect TCP port

Correct Answer: A

---

### QUESTION 2

Which of the following protocols can be used to change device configurations via encrypted and authenticated sessions? (Select TWO).

- A. SNMPv3
- B. SSh
- C. Telnet
- D. IPSec
- E. ESP
- F. Syslog

Correct Answer: AB

SNMPv3 (Simple Network Management Protocol version 3) is a protocol that provides secure access to network devices by encrypting and authenticating SNMP messages. It is used to manage and monitor network devices and can be used to change device configurations.

SSH (Secure Shell) is a protocol that provides secure remote access to network devices by encrypting and authenticating sessions between devices. It is commonly used to access and manage network devices, such as routers and switches, and can be used to change device configurations.

---

### QUESTION 3

A company's VoIP phone connection is cutting in and out. Which of the following should be configured to resolve this issue?

- A. 802.1Q tagging

- B. Jumbo frames
- C. Native VLAN
- D. Link aggregation

Correct Answer: A

---

#### QUESTION 4

A network administrator needs to implement routing capabilities in a hypervisor. Which of the following should the administrator most likely implement?

- A. VPC
- B. Firewall
- C. NFV
- D. IaaS

Correct Answer: C

To implement routing capabilities in a hypervisor, the administrator should most likely implement NFV (Network Functions Virtualization). NFV involves virtualizing network functions, such as routing, within a software environment rather than relying on dedicated hardware appliances. This allows for more flexibility, scalability, and efficient use of resources in a virtualized environment.

---

#### QUESTION 5

A network administrator needs to configure a server to use the most accurate NTP reference available. Which of the following NTP devices should the administrator select?

- A. Stratum 1
- B. Stratum 2
- C. Stratum 3
- D. Stratum 4

Correct Answer: A

NTP (Network Time Protocol) servers are organized into a hierarchy known as strata. Stratum 1 servers are the most accurate and are typically connected directly to a highly accurate reference time source, such as an atomic clock. Stratum 2 servers are connected to stratum 1 servers and are slightly less accurate than stratum 1 servers. Stratum 3 servers are connected to stratum 2 servers and are slightly less accurate than stratum 2 servers, and so on.

In order to use the most accurate NTP reference available, the administrator should configure the server to use a stratum 1 NTP server.
