QUESTION 1

An administrator recently implemented new SOHO routers for a company's teleworking employees. Before deploying the routers, the administrator changed the default credentials and disabled unnecessary services. Within a few days of deployment, hackers gained access to the routers. Which of the following is the MOST important thing the administrator forgot to do?

- A. Disable unused physical router ports.
- B. Generate new encryption keys.
- C. Upgrade the router firmware.
- D. Create a database of file hashes on the router.

Correct Answer: A

QUESTION 2

A consultant is working with two international companies. The companies will be sharing cloud resources for a project.

Which of the following documents would provide an agreement on how to utilize the resources?

- A. MOU
- B. NDA
- C. AUP
- D. SLA

Correct Answer: A

A memorandum of understanding (MOU) is a document that describes an agreement between two or more parties on how to utilize shared resources for a project. An MOU is not legally binding, but it outlines the expectations and responsibilities of each party involved in the collaboration. An MOU can be used when two international companies want to share cloud resources for a project without creating a formal contract. References:

QUESTION 3

A technician is installing a cable modem in a SOHO. Which of the following cable types will the technician MOST likely use to connect a modem to the ISP?

- A. Coaxial
- B. Single-mode fiber
- C. Cat 6e
- D. Multimode fiber

Correct Answer: A

Coaxial cables are commonly used in cable television and broadband cable Internet installations. They are typically used to connect the cable modem to the wall outlet or the cable modem termination system (CMTS) provided by the ISP.

QUESTION 4

A network administrator is troubleshooting a connectivity performance issue. As part of the troubleshooting process, the administrator performs a traceout from the client to the server, and also from the server to the client. While comparing the outputs, the administrator notes they show different hops between the hosts. Which of the following BEST explains these findings?

- A. Asymmetric routing
- B. A routing loop
- C. A switch loop
- D. An incorrect gateway

Correct Answer: A

Asymmetric routing is when the flow of packets in one direction passes through a different interface than that used for the return path

QUESTION 5

Users within a corporate network need to connect to the Internet, but corporate network policy does not allow direct connections. Which of the following is MOST likely to be used?

- A. Proxy server
- B. VPN client
- C. Bridge
- D. VLAN

Correct Answer: A
