QUESTION 1

The LPN is caring for a postoperative patient who had an open appendectomy. Where would he look to check the incision site?

- A. the right lower quadrant
- B. the left upper quadrant
- C. the right upper quadrant
- D. the left lower quadrant

Correct Answer: A Exam J

QUESTION 2

When working with multicultural populations, the nurse should consider all of the following when planning care for a client with an altered sexuality pattern except _____.

- A. some members of the Hispanic and Native-American cultures are very open when discussing sexuality
- B. some cultures view the postpartum period as a state of impurity
- C. some women in the African-American culture view childbearing as a validation of their femaleness
- D. some Native-American women believe monthly menstruation maintains physical well-being and harmony

Correct Answer: A

Many cultures (including the Hispanic and Native-American cultures) are sometimes hesitant to discuss sexuality.

Some Navajos, Hispanics, and Orthodox Jews view the postpartum period as a state of impurity and might seclude women as long as they are bleeding. The seclusion is usually ended with a ritual bath.

Many white teenage girls approve of the prevention of pregnancy, and many African-American teenage girls value pregnancy.

Many Native-American women believe in the importance of monthly menstruation to maintain physical wellbeing and harmony.

QUESTION 3

Which of these is not one of the items in the APGAR Score?

- A. skin color

- B. muscle tone
- C. respiratory rate
- D. reflex irritability

Correct Answer: C

QUESTION 4

An LPN is caring for a new admission recovering from a knee replacement.

In assisting the patient to the bathroom, what step would best prevent a patient fall?

- A. Ask the patient if he or she prefers crutches or a walker.
- B. Ask the patient to stand and extend his or her arms for 5 seconds.
- C. Ask the patient to march in place before walking toward the bathroom.
- D. Ask the patient to shake hands while in bed.

Correct Answer: D

QUESTION 5

A client receiving drug therapy with furosemide and digitalis requires careful observation and care.

In planning care for this client, the nurse should recognize that _____ electrolyte imbalances is most likely to occur.

- A. hyperkalemia
- B. hypernatremia
- C. hypokalemia
- D. hypomagnesemia

Correct Answer: C

Diuretics such as furosemide might deplete serum potassium. Additionally, the action of digitalis might be potentiated by hypokalemia.

These drugs are not associated with hyperkalemia.

Diuretic therapy could cause hyponatremia, not hypernatremia.

Hypomagnesemia is generally associated with poor nutrition, alcoholism, and excessive GI or renal losses.
