QUESTION 1

A physician orders the administration of ibuprofen, but the nurse notices the patient is allergic to NSAIDs. What should the nurse do?

- A. Find out how serious the patient's reaction is to NSAID exposure.
- B. Administer the medication per the physician's order.
- C. Contact the physician to verify the order and discuss concerns.
- D. Ask the patient if he or she feels comfortable taking the medication.

Correct Answer: C

QUESTION 2

Select the stage of shock that is accurately paired with its characteristic.

- A. The initial stage of shock: Hyperventilation occurs and the blood pH rises.
- B. The compensatory stage of shock: Hypoxia occurs and lactic acid rises.
- C. The progressive stage of shock: Histamine is released; fluid and proteins leak into surrounding tissues and the blood thickens.
- D. The refractory stage of shock: Potassium ions leak out, sodium ions build up and metabolic acidosis increases.

Correct Answer: C

During the progressive stage of shock, histamine is released, fluid and proteins leak into surrounding tissues and the blood thickens. The initial stage of shock is marked with hypoxia and an increase in lactic acid; the compensatory stage of shock is characterized with hyperventilation and rises in the blood pH.

The progressive stage of shock is also characterized with the leakage of potassium ions, the buildup of sodium ions and increasingly more severe metabolic acidosis.

The refractory, or final, stage of shock becomes irreversible.

QUESTION 3

When caring for a Native-American family, which of the following the nurse needs to consider?

- A. The family consists solely of the parents and children.
- B. Native Americans tend to be future oriented.
- C. Some Native Americans use herbs and psychologic treatment of illnesses.

D. Health care is usually prescribed by a medicine man (shaman).

Correct Answer: C

Symbols of health or traditions might include certain ritualistic items that are used to maintain, protect, or restore physical, mental, or spiritual health.

QUESTION 4

Which of the following vaccines is a live virus?

- A. varicella
- B. IPV
- C. DTaP
- D. hepatitis B

Correct Answer: A

Varicella is a live virus, as is OPV. IPV is an inactivated polio vaccine.

QUESTION 5

A nurse is in the operating room where x-rays are being taken during the procedure.

What is the best way to use this equipment safely?

- A. Ensure the equipment being used to take x-rays has sterile drapes and covers on it to prevent contamination of the sterile field.
- B. Have a lead apron and thyroid shield on when being exposed to active radiation, such as x-rays.
- C. Make sure the patient does not have any metal in their body which could cause the machine to malfunction.
- D. Ensure the time out has been done prior to any x-ray imaging being taken.

Correct Answer: B
