QUESTION 1

A client with major head trauma is receiving bolus enteral feeding. The most important nursing order for this client is _____.

- A. measure intake and output
- B. check albumin level
- C. monitor glucose levels
- D. increase enteral feeding

Correct Answer: A

It is important to measure intake (I) and output (O), which should be approximately equal.

Enteral feedings are hyperosmotic agents pulling fluid from cells into the vascular bed.

Water given before feeding presents a hyperosmotic diuresis. I and O measures assess fluid balance.

QUESTION 2

Priorities to be considered intermediate are _____.

- A. the nonemergency, non-life-threatening needs of the client.
- B. those tasks that can be delegated to assistive personnel.
- C. those tasks that can be performed at the end of the shift.
- D. those task that can be performed at any time.

Correct Answer: A

Priorities designated as intermediate by the nurse are those that are not urgent. They do not affect the client's immediate physiological status. This does not imply that they are not important or not necessary.

Intermediate priorities might still require the skill level of an RN for completion. There might be specific time requirements for completion as well.

QUESTION 3

Which of the following foods is a complete protein?

- A. corn
- B. eggs
- C. peanuts

D. sunflower seeds

Correct Answer: B

Eggs are a complete protein. The remaining options are incomplete proteins.

QUESTION 4

The LPN is helping a patient get out of bed to use the restroom. Which of these actions represents proper ergonomic practice?

- A. Aid the patient in sitting/standing by lifting with the legs and keeping the back straight.
- B. Bend over the patient to get a good grip when sitting the patient up.
- C. Lift the patient into a standing position by using your leg and back muscles.
- D. Let the patient use your body to pull up in a sitting, then standing, position.

Correct Answer: A

QUESTION 5

The PN is admitting a patient to the unit and the patient has rapidly blinking eyes, stuck out tongue, and a distorted posture.

Which of these medications is the patient most likely taking?

- A. Ondansetron
- B. Haloperidol
- C. Clozapine
- D. Fluoxetine

Correct Answer: B
