QUESTION 1

An administrator protected a DB VM running on a Nutanix cluster with NearSync Replication, which schedules to repeat every 15 minutes to a second site. The daily change rate is low. During nightly backups, the replication window is missed due to write volume.

Which two options describe the expected behavior? (Choose two.)

- A. NearSync stops working and fails over to the remote site.
- B. Protection Domain transitions back to the hourly schedule.
- C. The Administrator needs to re-enable it manually.
- D. The system continuously tries to get to the NearSync schedule.

Correct Answer: AD

QUESTION 2

An administrator deploys Exchange on a Nutanix cluster. The administrator creates two containers with RF2 configuration:

1.
One container for Exchange
 2.
One container for the other VMs
- The Exchange VM is experiencing I/O performance issues.
- Which changes to Storage Optimization should be used on the Exchange container to enhance I/O performance?
- A. No data reduction
 - B. Post process Deduplication only
 - C. Inline compression and EC-X
 - D. Inline compression and Deduplication

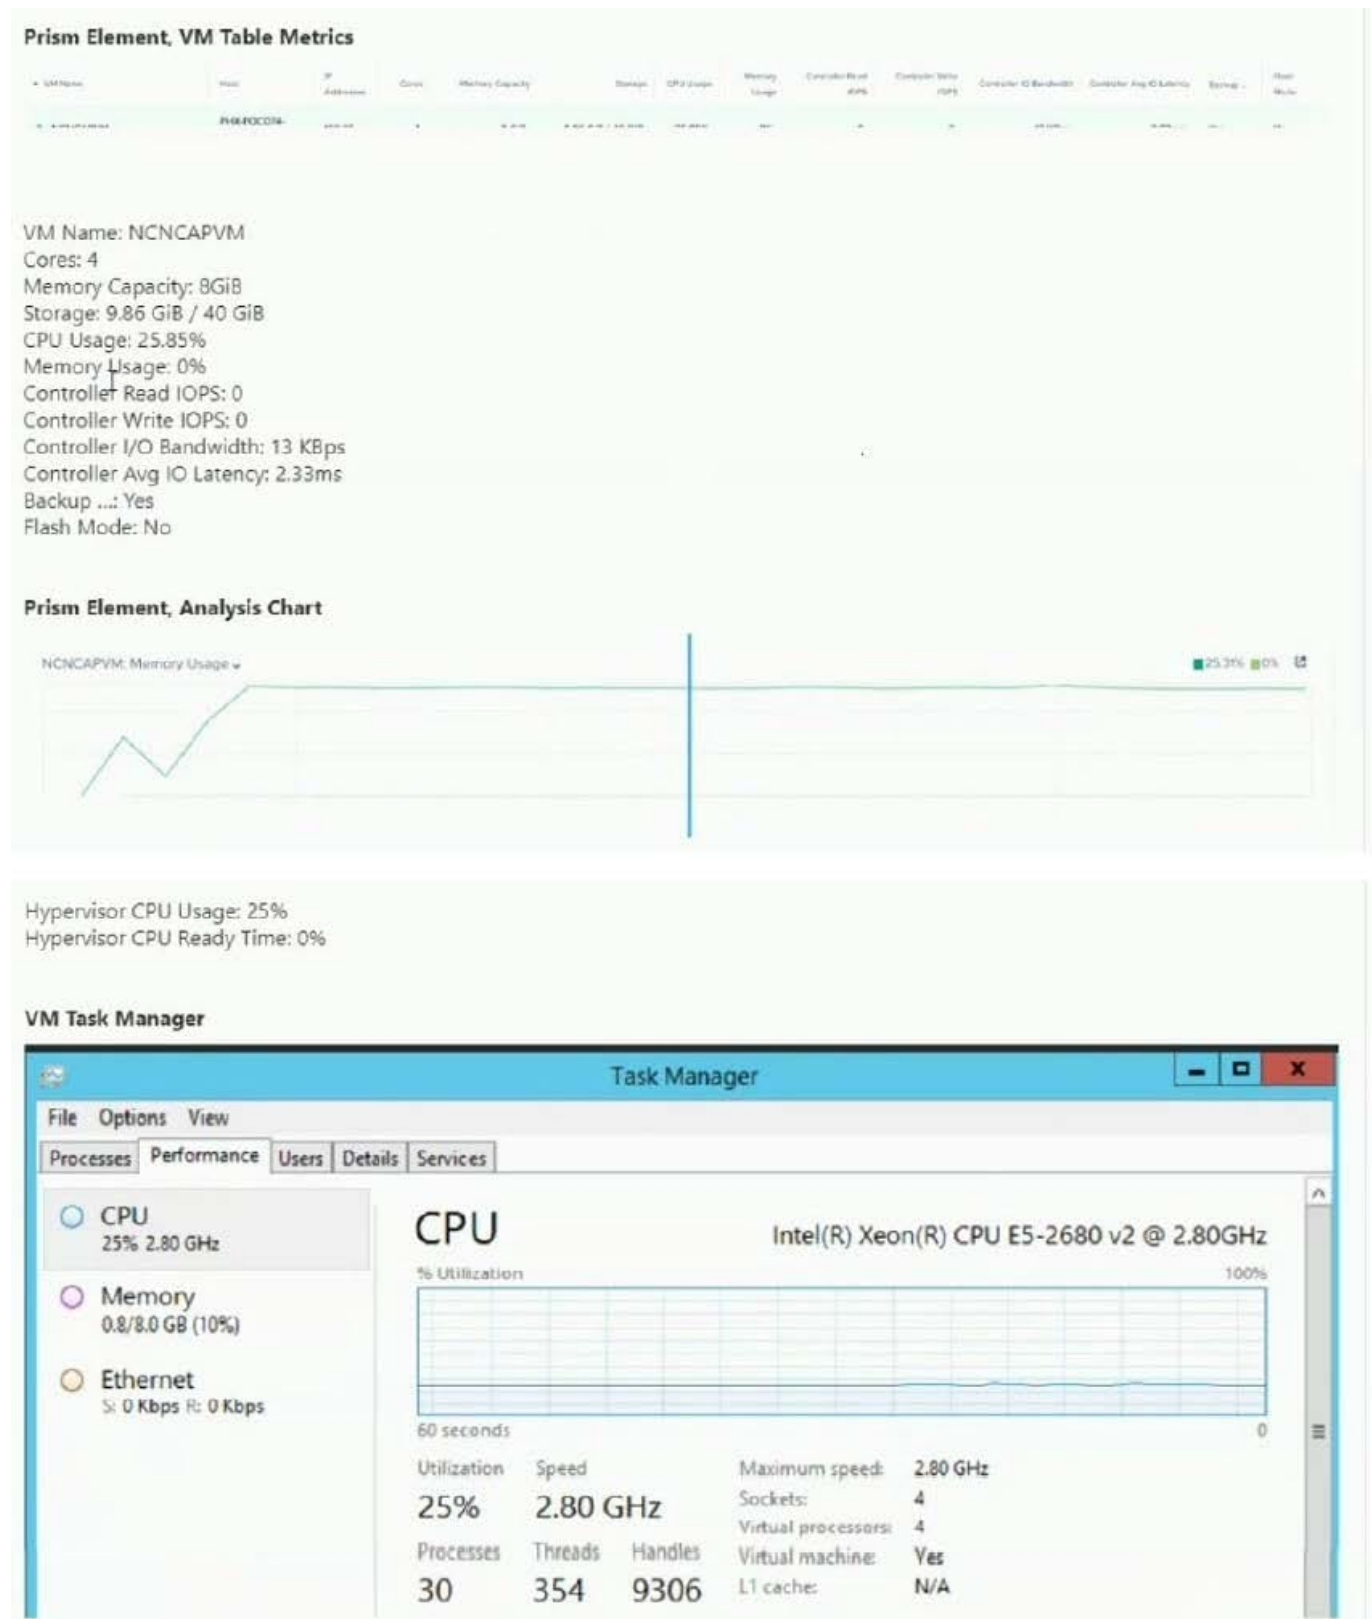

Correct Answer: C

QUESTION 3

Refer to the exhibits.

An administrator has reported that a new VM is not performing well.

After analyzing the information presented in the exhibits, which option shows the best conclusion regarding this workload?

- A. VM is CPU constrained since the hypervisor cannot provide the required resources.
- B. VM is CPU constrained because more CPU needs to be added to the VM.
- C. VM is Storage constrained, because the workload is waiting for storage access.
- D. VM is not CPU constrained, because the VM is not running, a multithreaded application.

Correct Answer: C

QUESTION 4

An administrator has a custom backup application that requires a 2TB disk and runs in Windows. Throughput is considerably lower than expected. The application was installed on a VM with the following configuration:

1.

Four vCPUs with one core/vCPU

2.

4GB of Memory

3.

One 50GB vDisk for the Windows installation

4.

One 2TB vDisk for the application

What is the recommended configuration change to improve throughput?

- A. Increase the number of cores per vCPU
- B. Increase the vCPUs assigned to the VM
- C. Span the 2TB disk across four vDisks
- D. Add 4GB of memory to the VM

Correct Answer: B

QUESTION 5

An administrator is deploying Nutanix Files 3.5 and needs to configure the sizing of the FSVs for an increased number of concurrent SMB connections over the default 750. What should the administrator do?

- A. Deploy the Files VMs. power down the three FSVs. change the CPU and RAM via Prism, and then power the three FSVs back up

B. During installation, click Customize on the File Server Installation screen, change the number of connections, and finish the installation

C. Complete the default installation change the CPU and RAM in Prism, and then log into the File Server dashboard and change the File Server Properties

D. During installation, input the correct number of connections in the File Server Installation screen and complete the installation

Correct Answer: B
