QUESTION 1

How should they be positioned in putting a patient into the lithotomy position for examination?

- A. On their back, heels above hips
- B. On their front, heels above hips
- C. On their side, completely level
- D. On their back, heels below hips

Correct Answer: A

The lithotomy position is used for examinations of the perineal area, as well as in childbirth.

The patient should be lying on their back, with their heels above their hips. Stirrups will often be used to achieve this position.

QUESTION 2

When drawing blood from a patient, you can make the veins in their arm become more prominent by asking them to _____.

- A. Point their arm towards the floor
- B. Breathe rapidly
- C. Hold their breath
- D. Clench their fist

Correct Answer: D

When a patient clenches their fist the amount of blood flowing into the hand is temporarily decreased by the contraction and so blood builds up further up the arm, making veins more prominent and so easier to see.

QUESTION 3

Gas exchange in the lungs occurs in one-celled air sacs called _____.

- A. Alveoli
- B. Bronchi
- C. Capillaries
- D. Pleurae

Correct Answer: A

QUESTION 4

When checking the identity of a patient, most health care facilities require that the patient present _____ forms of identification.

- A. 3
- B. 1
- C. 0
- D. 2

Correct Answer: D

QUESTION 5

Which of the following symptoms would a patient exhibit that could be indicative of cerebral edema?

- A. Abdominal pain
- B. Itching
- C. Seizures and coma
- D. Normal vision

Correct Answer: C
