QUESTION 1

In an AHV cluster, an administrator needs to enable an application to share a disk b group but needs to enable the VMs to see the volume group.

How should the administrator accomplish this task?

- A. Create a shared folder for the VMs using Nutanix Files.
- B. Add the volume group to the VM using the update link from the VM dashboard.
- C. Configure a virtual disk on each VM with identical attributes in the storage dashboard.
- D. Add a disk to one VM and enable read/write on it from the other VM.

Correct Answer: B

QUESTION 2

An administrator sets up a protection domain that replicates to a remote site. The administrator must perform DR test every 6 months.

Which snapshot is used when activate is checked on the remote site's production domain?

- A. a new snapshot is taken automatically so the original is not modified
- B. the oldest protection domain snapshot at remote site is used
- C. A new snapshot is taken and replicated over the source cluster
- D. the newest protection domain snapshot at the remote site is used

Correct Answer: D

QUESTION 3

An administrator has an existing Nutanix cluster that is configured to protect VMs using Time Stream. The administrator now needs to add support for protecting these VMs in AWS.

Which two changes must be made to the cluster to meet this requirement? (Choose two)

- A. Configure protection domains with a 15-minute schedule.
- B. Add the remote site to the existing protection domains.
- C. Configure a remote site.
- D. Deploy a remote site for another cluster.

Correct Answer: BD
