QUESTION 1

When a VM is restarted on a new host during an HA event, how is the I/O data path impacted?

- A. All data and I/O associated with the VM are migrated to the new host.
- B. All write I/O occurs on the new host. When reading old data, the I/O is served from the host the VM previously resided on.
- C. All I/O continues to be served from the host the VM previously resided on.
- D. All write I/O occurs on the new host. When reading old data, the I/O may be forwarded by the local CVM to the remote CVM.

Correct Answer: B

QUESTION 2

Microsegmentation was recently enabled in a Nutanix environment. The administrator wants to leverage Prism Central to create a policy that will block all traffic regardless of direction, between two groups of VMs identified by their category. Which policy should be used to meet this requirement?

- A. An Application Security Policy
- B. A Quarantine Policy
- C. A Whitelist-Based Policy
- D. An Isolation Environment Policy

Correct Answer: D

QUESTION 3

AHV IPAM assigns an IP address from the address pool when creating a managed VM NIC.

At which two instances does the address release back to the pool? (Choose two)

- A. The IP address lease expires
- B. The VM NIC is deleted.
- C. The IP address is changed to static.
- D. The VM is deleted.

Correct Answer: BD

Explanation: https://portal.nutanix.com/page/documents/solutions/details/?targetId=BP-2029_AHV:BP-2029_AHV
Administrators can use Acropolis with IPAM to deliver a complete virtualization deployment, including network management, from the unified Prism interface. This capability radically simplifies the traditionally complex network management associated with provisioning VMs and assigning network addresses. To avoid address overlap, be sure to work with your network team to reserve a range of addresses for VMs before enabling the IPAM feature. The Acropolis master assigns an IP address from the address pool when creating a managed VM NIC; the address releases back to the pool when the VM NIC or VM is deleted.

QUESTION 4

A cluster is configured for RF2. The data resiliency status field in Prism is Critical. What is the state of the cluster?

- A. A drive has failed and the node is critically close to failure.
- B. A drive has failed and successfully re-replicated the missing data.
- C. A drive has failed and the node needs to be rebooted.
- D. A drive has failed and is currently re-replicating the missing data.

Correct Answer: D

QUESTION 5

20 sites with two-node clusters in Singapore 20 sites with two-node clusters in Japan 30 sites with two-node clusters in Australia

The HQ and main datacenter is based in Hong Kong.

What is the minimum number of Witness VMs the administrator should configure at the Hong Kong HQ datacenter?

- A. 1
- B. 2
- C. 3
- D. 4

Correct Answer: B
