-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

An administrator is implementing a VDI solution. The workload will be a series of persistent desktops in a dedicated storage container within a four-node cluster. Storage optimizations should be set on the dedicated storage container to give optimal performance including during a node failure event.

Which storage optimizations should the administrator set to meet the requirements?

- A. Compression only
- B. Deduplication and Erasure Coding
- C. Compression and Deduplication
- D. Compression, Deduplication, and Erasure Coding

Correct Answer: C

---

### QUESTION 2

A user running a Computer Aided Design (CAD) application is complaining about slow response time within the VM, particular when moving windows or rendering images. Which VM metric will guide the administrator toward diagnosing the problem?

- A. Storage Controller Latency
- B. GPU Usage
- C. Swap in Rate
- D. Hypervisor Memory Usage (%)

Correct Answer: B

---

### QUESTION 3

In a default configuration of an AHV cluster, a single node fails. What happens to the running VMs on that node?

- A. The cluster restarts all VMs in the event of a host failure
- B. The VMs do a live migration to the master node in the cluster
- C. The VMs do a live migration to any other node in the cluster
- D. The cluster attempts to restart VMs on other hosts

Correct Answer: D

#### QUESTION 4

An administrator wants to have a VM on an AHV cluster with access to multiple VLANs. What is the most efficient way to achieve this?

- A. Update a vNIC on the VM to operate in trunked mode for all desired VLANs.
- B. Create a network in AHV associated with all those VLANs on all hosts.
- C. Use SFPs that allow the needed VLANs.
- D. Use one vNIC per VLAN for the VM.

Correct Answer: A

---

#### QUESTION 5

An administrator adds a node with older generation processors to an existing AHV cluster with newer generation processors. What is the effect on live migration?

- A. Live migration continues to function as expected and VMs can move to any AHV host.
- B. Live migration is prevented until the administrator enables the legacy migration option.
- C. Live migration is prevented until the administrator manually changes the newer processor level.
- D. Live migration of VMs is prevented between newer and older processors.

Correct Answer: D
