Following Questions and Answers are all new published by Network Appliance Official Exam Center

QUESTION 1

You have a SnapLock Compliance volume that needs to be replicated to a different cluster at a disaster recovery site. Which two statements concerning the SnapMirror destination volume are true? (Choose two.)

A. The destination volume type must be SnapLock Enterprise.

B. The destination volume type must be SnapLock Compliance.

C. The destination cluster does not require a SnapLock license.

D. The destination cluster requires a SnapLock license.

Correct Answer: BD

B: To create an end-to-end relationship between SnapLock Compliance volumes by using SnapMirror, you need to create both the source and the destination volumes as SnapLock Compliance volumes and then initialize the mirroring relationship by using the snapmirror initialize command. The other commands you use differ depending on whether you are creating a volume SnapMirror relationship for a traditional volume or a FlexVol volume.

D: A SnapLock license entitles you to use both SnapLock Compliance mode and SnapLock Enterprise mode. SnapLock licenses are issued on a per-node basis. You must install a license for each node that hosts a SnapLock aggregate.

QUESTION 2

NetApp ONTAP uses Snapshot copies for which two features? (Choose two.)

A. cluster peering

B. FlexClones

C. FlexArray FLI

D. SMTape

Correct Answer: BD

You can create FlexClone files and FlexClone LUNs from an existing Snapshot copy of the parent files and parent LUNs contained in a FlexVol volume.

SMTape is a high performance disaster recovery solution from Data ONTAP that backs up blocks of data to tape. It is a Snapshot copy-based backup to tape feature.

QUESTION 3

Click the Exhibit button.

```
na01-01> sysstat -u 2

CPU  Tootal       Net     kB/s     Disk     kB/s   Tape    kB/s  Cache  Cache    CP    CP   Disk
     ops/s         in      out     read    write   read   write    age    hit  time    ty   util
50%   2800      158700    12300   144040    19000      0       0    21s    78%   99%    Bn    99%
63%   7480      102000    33900    69790   302610      0       0    21s    55%   98%    :n    98%
77%   3740      419700    18300    16300   433289      0       0    30s    44%  100%    :n   100%
49%   5240      324800    93600    91290   320580      0       0    38s    87%  100%    Bn   100%
66%   3430      375800    21900    13500   328605      0       0    44s    76%  100%    :n    99%
```

You are receiving reports of high storage latency from the database administrators. The NetApp storage system is connected to the network using 10 Gb. You run the sysstat command as shown in the exhibit. In this scenario, why is storage latency high?

A. The system does not have enough cache.

B. The system is experiencing a disk bottleneck.

C. The CPU usage is too high.

D. The network interfaces are maximized out.

Correct Answer: B

QUESTION 4

Click the Exhibit button.

```
cluster1::> volume create -vserver acmefs01 -volume nedia_vol -aggr-list sas_01, sas_02 -
junction-path /media -size 200TB -space-guarantee none
```

You create a volume as shown in the exhibit. Which statement about the new volume is true?

A. A FlexVol volume is created on the aggregate (sas_01 or sas_02) with the most free space.

B. A FlexVol volume is created on aggregate sas_01 can only be moved to aggregate sas_02.

C. A FlexGroup volume is created with eight constituents.

D. A FlexGroup volume is created with two constituents

Correct Answer: D

The Volume create parameter -aggr-list , ... - List of Aggregates for FlexGroup Constituents

Specifies an array of names of aggregates to be used for FlexGroup constituents. Each entry in the list will create a constituent on the specified aggregate.

---

QUESTION 5

Click the Exhibit button.

```
netapp01::> net int create -vserver acmefs01 -lif acmefs01 -role data -data-protocol cifs -
home-node netapp01-01 -home-port a0a-103 -address 10.1.100.64 -netmask 255.255.255.0
     (network interface create)

Info: Failed to create logical interface.
Error: command failed: Duplicate ip address 10.1.100.64
```

You manage a multi-tenant NetApp storage system. You start configuring an SVM for a new customer and receive the error shown in the exhibit when you attempt to create a LIF. You verify that the IP address is correct and that the customer LIF does not already exist. However, you see that another customer is using the same IP address in their SVM.

How would you correct this problem?

A. Create a new VLAN for the new customer.

B. Create the LIF with a different IP address.

C. Create an IPspace for the new customer.

D. Create a broadcast domain for the new customer.

Correct Answer: C

The IPspace feature enables a single storage system to be accessed by clients from more than one disconnected network, even if those clients are using the same IP address. References:
