QUESTION 2

You perform a security trace when troubleshooting a data access problem for a user. The results are shown in the exhibit.

```
cluster1::> vserver security trace trace-result show -vserver svml

Vserver: svml

Node          Index  Filter Details          Reason
-----
cluster1-01  1      Security Style: NTFS and NT ACL
                                         Access is denied. The
                                         requested permissions are not
                                         granted by the ACE while
                                         opening existing file or
                                         directory. Access is not
                                         granted for: "Read Attributes"

                                         Protocol: cifs
                                         Volume: -
                                         Share: dept
                                         Path: /list.xlsx
                                         Win-User: LAB\domusr1
                                         UNIX-User: pcuser
                                         Session-ID: 14249952170953675090
```

What should you do to solve this issue?

- A. Grant the user Read Attributes access to the path.
- B. Add the user to the BUILTIN\power Users group.
- C. Add the user to the BUILTIN\Users group.
- D. Grant the user Execute access to the path.

Correct Answer: A Section: (none)
