QUESTION 2

View the following exhibit: Which two statements are true if the script is executed using the Remote FortiGate Directly (via CLI) option? (Choose two.)

Create New CLI Script

[\[View Sample Script\]](#)

Script Name	<input type="text" value="Config"/>	
Comments	<input type="text" value="Write a comment"/>	0/255
Type	<input type="text" value="CLI Script"/>	
Run Script on	<input type="text" value="Remote FortiGate Directly(via CLI)"/>	

Script Detail

```
config vpn ipsec phase1-interface
edit "H25_0"
set auto-discovery-sender enable
next
end
config system interface
edit "H25_0"
set vdcn "root"
set ip 172.16.1.1 255.255.255.255
set remote-ip 172.16.1.254
next
end
config router bgp
set as 65100
set router-id 172.16.1.1
config neighbor-group
```

Advanced Device Filters

- A. You must install these changes using Install Wizard
- B. FortiGate will auto-update the FortiManager\'s device-level database.
- C. FortiManager will create a new revision history.
- D. FortiManager provides a preview of CLI commands before executing this script on a managed FortiGate.

Correct Answer: BC

QUESTION 3

In the event that the primary FortiManager fails, which of the following actions must be performed to return the FortiManager HA to a working state?

- A. Secondary device with highest priority will automatically be promoted to the primary role, and manually reconfigure all

other secondary devices to point to the new primary device

B. Reboot one of the secondary devices to promote it automatically to the primary role, and reconfigure all other secondary devices to point to the new primary device.

C. Manually promote one of the secondary devices to the primary role, and reconfigure all other secondary devices to point to the new primary device.

D. FortiManager HA state transition is transparent to administrators and does not require any reconfiguration.

Correct Answer: C

FortiManager_6.4_Study_Guide-Online ?page 346

FortiManager HA doesn't support IP takeover where an HA state transition is transparent to administrators. If a failure of the primary occurs, the administrator must take corrective action to resolve the problem that may include invoking the state transition. If the primary device fails, the administrator must do the following in order to return the FortiManager HA to a working state:

1.

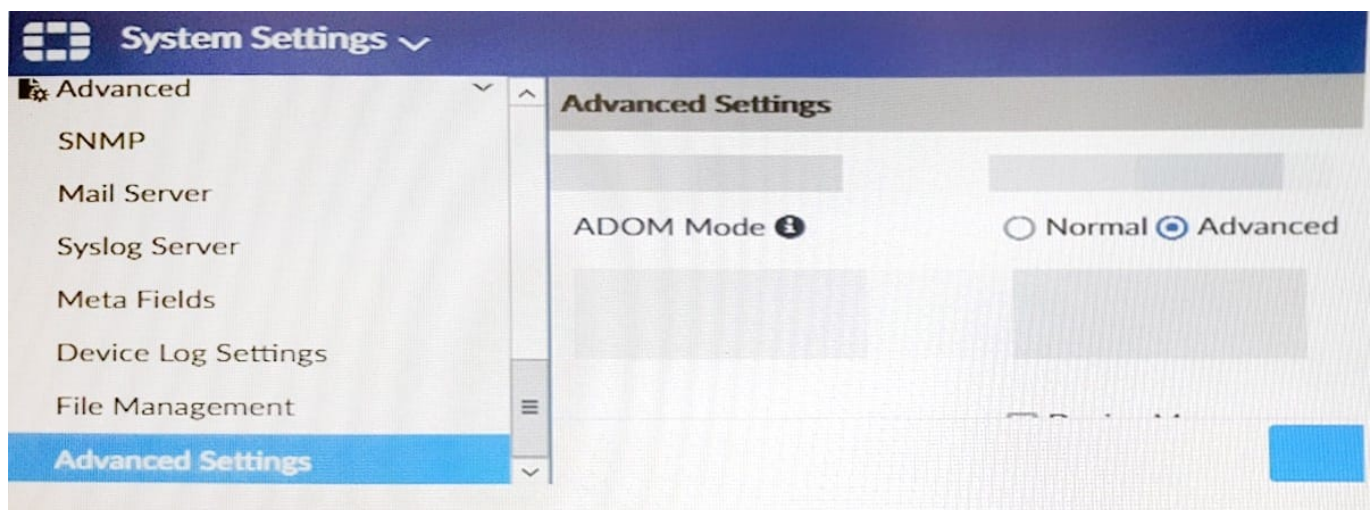

Manually reconfigure one of the secondary devices to become the primary device

2.

Reconfigure all other secondary devices to point to the new primary device

QUESTION 4

View the following exhibit.

Which of the following statements are true based on this configuration setting? (Choose two.)

A. This setting will enable the ADOMs feature on FortiManager.

B. This setting is applied globally to all ADOMs.

C. This setting will allow assigning different VDOMs from the same FortiGate to different ADOMs.

D. This setting will allow automatic updates to the policy package configuration for a managed device.

Correct Answer: BC

QUESTION 5

An administrator has assigned a global policy package to custom ADOM1. Then the administrator creates a new policy package, Fortinet, in the custom ADOM1. Which statement about the global policy package assignment to the newly-created policy package Fortinet is true?

- A. When a new policy package is created, it automatically assigns the global policies to the new package.
- B. When a new policy package is created, you need to assign the global policy package from the global ADOM.
- C. When a new policy package is created, you need to reapply the global policy package to the ADOM.
- D. When a new policy package is created, you can select the option to assign the global policies to the new package.

Correct Answer: A

Global Policy Package is applied at the ADOM level and you have the option to choose which ADOM policy packages you want to exclude (there is no option to choose Policy Packages to include).
