QUESTION 1

View the following exhibit:

```
#diagnose fmupdate view-serverlist fds
Fortiguard Server Comm: Enabled
Server Override Mode: Loose
FDS server list :
Index Address          Port    TimeZone  Distance  Source
-----
*0    10.0.1.50             8890    -5        0         CLI
1     96.45.33.89           443     -5        0         FDNI
2     96.45.32.81           443     -5        0         FDNI
....
38  fds1.fortinet.com     443     -5        0         DEFAULT
```

How will FortiManager try to get updates for antivirus and IPS?

- A. From the list of configured override servers with ability to fall back to public FDN servers
- B. From the configured override server list only
- C. From the default server fds1.fortinet.com
- D. From public FDNI server with highest index number only

Correct Answer: A

Reference: <https://community.fortinet.com/t5/Fortinet-Forum/Clarification-of-FortiManager-s-quot-Server-Override-Mode-quot/td-p/89973>

QUESTION 2

Which two items does an FGFM keepalive message include? (Choose two.)

- A. FortiGate uptime
- B. FortiGate license information
- C. FortiGate IPS version
- D. FortiGate configuration checksum

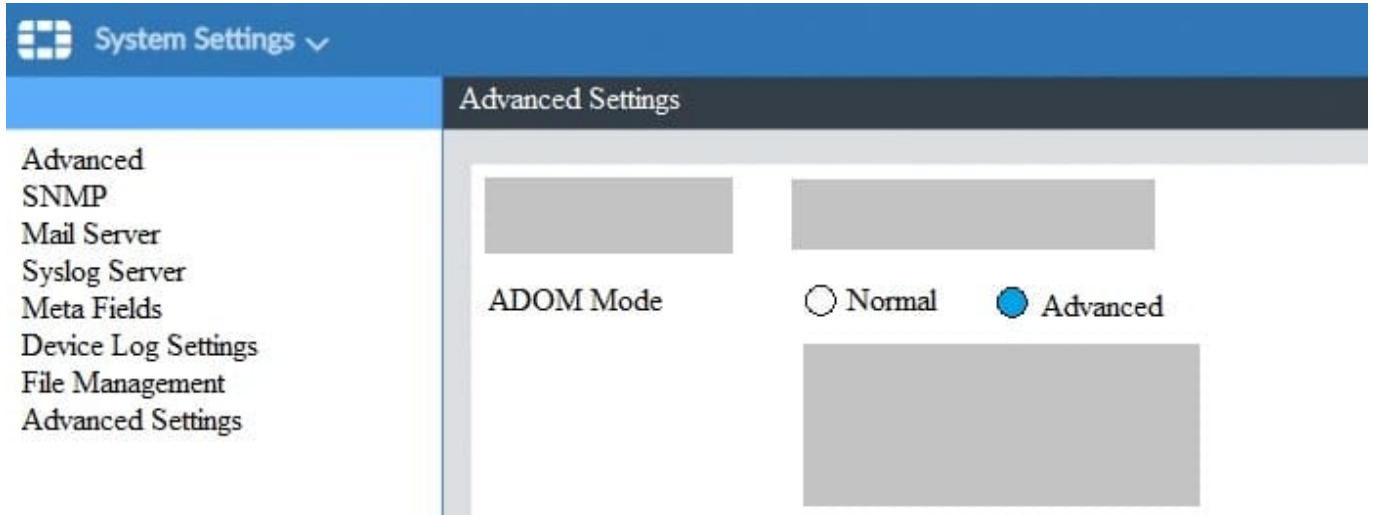

Correct Answer: CD

Reference: <https://docs.fortinet.com/document/fortimanager/6.2.0/fortigate-fortimanager-communications-protocol-guide/579138/keep-alive-messages>

QUESTION 3

View the following exhibit.

What is the purpose of setting ADOM Mode to Advanced?

- A. The setting allows automatic updates to the policy package configuration for a managed device
- B. The setting enables the ADOMs feature on FortiManager
- C. This setting allows you to assign different VDOMs from the same FortiGate to different ADOMs.
- D. The setting disables concurrent ADOM access and adds ADOM locking

Correct Answer: C

Reference: <https://docs.fortinet.com/document/fortianalyzer/7.0.0/administration-guide/66530/adom-device-modes>

QUESTION 4

View the following exhibit, which shows the Download Import Report: Why it is failing to import firewall policy ID 2?

```
Start to import config from devices(Remote-FortiGate) vdom (root)to adom (MyADOM),  
Package(Remote-FortiGate)  
"firewall address", SUCCESS,"(name=REMOTE_SUBNET,oid=580, new object)"  
"firewall policy",SUCCESS,"(name=1, oid=990,new object)"  
"firewall policy",FAIL,"(name=ID:2(#2), oid=991, reason=interface(interface binding  
Contradiction.detail:any<-port6)binding fail)"
```

- A. The address object used in policy ID 2 already exist in ADON database with any as interface association and conflicts with address object interface association locally on the FortiGate
- B. Policy ID 2 is configured from interface any to port6 FortiManager rejects to import this policy because any interface does not exist on FortiManager
- C. Policy ID 2 does not have ADOM Interface mapping configured on FortiManager
- D. Policy ID 2 for this managed FortiGate already exists on FortiManager in policy package named Remote-FortiGate.

Correct Answer: A

FortiManager_6.4_Study_Guide-Online page 331and; 332

QUESTION 5

In the event that the primary FortiManager fails, which of the following actions must be performed to return the FortiManager HA to a working state?

- A. Secondary device with highest priority will automatically be promoted to the primary role, and manually reconfigure all other secondary devices to point to the new primary device
- B. Reboot one of the secondary devices to promote it automatically to the primary role, and reconfigure all other secondary devices to point to the new primary device.
- C. Manually promote one of the secondary devices to the primary role, and reconfigure all other secondary devices to point to the new primary device.
- D. FortiManager HA state transition is transparent to administrators and does not require any reconfiguration.

Correct Answer: C

FortiManager_6.4_Study_Guide-Online ?page 346

FortiManager HA doesn't support IP takeover where an HA state transition is transparent to administrators. If a failure of the primary occurs, the administrator must take corrective action to resolve the problem that may include invoking the state transition. If the primary device fails, the administrator must do the following in order to return the FortiManager HA to a working state:

1.
Manually reconfigure one of the secondary devices to become the primary device
2.
Reconfigure all other secondary devices to point to the new primary device
