QUESTION 1

In global load balancing, why might an administrator configure the response rate limit in FortiADC?

- A. To redirect requests from a blocked county
- B. To prevent FortiADG from being used in DNS amplification DoS attacks
- C. To protect back-end servers from SYN flood attacks
- D. To prioritize outgoing traffic by sending it through the link with the lowest response time

Correct Answer: B

QUESTION 2

To which two objects can link policies apply in FortiADC? (Choose two.)

- A. Virtual tunnel
- B. Virtual server
- C. Gateway
- D. Link group

Correct Answer: AD

QUESTION 3

An administrator has learned that some of the corporate web servers were exploited using SQL injection attacks. What should the administrator do to verify their web servers are not susceptible to the exploits?

- A. Configure WVS
- B. Configure a database health check
- C. Configure DNSSEC
- D. Configure SSLi

Correct Answer: A

QUESTION 4

When using FortiADC in a global load balancing configuration, in which two ways do general DNS settings differ from a global DNS policy? (Choose two.)

- A. Traffic not matching a global DNS policy is served by the general DNS settings
- B. Traffic matching source or destination criteria is served by the general DNS policy.
- C. Traffic matching the zone, as well as both source and destination criteria, is served by the global DNS policy.
- D. Traffic not matching general DNS settings is served by a matching global DNS policy.

Correct Answer: AC

QUESTION 5

What is the primary function of a virtual server?

- A. It balances traffic between real server pools
- B. It manages real server resources
- C. It processes client connections for application delivery
- D. It detects real server vulnerabilities using VWS

Correct Answer: AC
