QUESTION 1

What causes a host's state to change to "at risk"?

- A. The host has been administratively disabled.
- B. The logged on user is not found in the Active Directory.
- C. The host has failed an endpoint compliance policy or admin scan.
- D. The host is not in the Registered Hosts group.

Correct Answer: C

Failure ?Indicates that the host has failed the scan. This option can also be set manually. When the status is set to Failure the host is marked";At Ris"; for the selected scan.

QUESTION 2

What capability do logical networks provide?

- A. VLAN-based inventory reporting
- B. Interactive topology view diagrams
- C. Application of different access values from a single access policy
- D. Autopopulation of device groups based on point of connection

Correct Answer: A

NTM also includes reporting utilities such as network and inventory reports. You can generate reports for subnets, switch ports, and VLANs.

QUESTION 3

In which view would you find who made modifications to a Group?

- A. The Admin Auditing view
- B. The Alarms view
- C. The Event Management view
- D. The Security Events view

Correct Answer: A

It's important to audit Group Policy changes in order to determine the details of changes made to Group Policies by delegated users.
