QUESTION 1

What does the dirty flag mean in a FortiGate session?

- A. The session must be removed from the former primary unit after an HA failover.
- B. Traffic has been identified as from an application that is not allowed.
- C. The next packet must be re-evaluated against the firewall policies.
- D. Traffic has been blocked by the antivirus inspection.

Correct Answer: C

QUESTION 2

How does FortiManager handle FortiGuard requests from FortiGate devices, when it is configured as a local FDS?

- A. FortiManager will respond to update requests only from a managed device.
- B. FortiManager can download and maintain local copies of FortiGuard databases.
- C. FortiManager supports only FortiGuard push update to managed devices.
- D. FortiManager does not support web filter rating requests.

Correct Answer: B

QUESTION 3

View the global IPS configuration, and then answer the question below.

```
config ips global
    set fail-open disable
    set intelligent-mode disable
    set cp-accel-mode advanced
    set engine-count 0
end
```

Which of the following statements is true regarding this configuration? (Choose two.)

- A. IPS will scan every byte in every session.
- B. IPS acceleration is disabled in this FortiGate device's configuration.
- C. New packets requiring IPS inspection will be passed through during conserve mode.

D. FortiGate will spawn IPS engine instances based on the system load.

Correct Answer: AD

QUESTION 4

Which of the following statements about bulk configuration changes using FortiManager CLI scripts are correct? (Choose two.)

- A. When executed on the All FortiGate in ADOM, changes are automatically installed without creating a new revision history.
- B. When executed on the Remote FortiGate directly, administrators do not have the option to review the changes prior to installation.
- C. When executed on the Device Database, you must use the installation wizard to apply the changes to the managed FortiGate.
- D. When executed on the Policy Package, ADOM database, changes are applied directly to the managed FortiGate.

Correct Answer: BC

QUESTION 5

An administrator has configured two FortiGate devices for an HA cluster. While testing the HA failover, the administrator noticed that some of the switches in the network continue to send traffic to the former primary unit. The administrator decides to enable the setting link-failed-signal to fix the problem. Which one of the following statements about this command is true?

- A. Forces the former primary device to shut down all its non-heartbeat interfaces for one second while the failover occurs.
- B. Sends an ARP packet to all connected devices, indicating that the HA virtual MAC address is reachable through a new master after a failover.
- C. Disables all the non-heartbeat interfaces in all the HA members for two seconds after a failover.
- D. Sends a link failed signal to all connected devices.

Correct Answer: A
