QUESTION 1

An administrator is running into performance issues due to a high number of records being created in a flow. How can the administrator modify the flow to improve scalability?

- A. Ask a developer to create a Flow apex action to offload the creation of records
- B. Ask a developer to offload all the Flow functionality to Apex code via Triggers and Apex classes
- C. Use the Bulk Create Records node in the Flow to improve performance
- D. Offload the creation of records to a Subflow that will be called in the Reference Flow

Correct Answer: C

The best way for an administrator to modify the flow to improve scalability when running into performance issues due to a high number of records being created in a flow is to use the Bulk Create Records node in the Flow. This node allows the administrator to create multiple records of the same object type in one transaction, which reduces the number of database operations and improves the flow performance.

QUESTION 2

Users are reporting slow load times for Lightning Record Pages. How can an administrator analyze the performance?

- A. Use the Analyze function in the Lightning Record Page editor
- B. Run a performance analysis using the Developer Console
- C. Use the Page Layout Analysis tool in Setup
- D. Use Chrome DevTools

Correct Answer: A

The Analyze function in the Lightning Record Page editor helps an administrator analyze the performance of a Lightning Record Page. It provides recommendations on how to improve the page load time, such as removing unused components, reducing the number of fields, or using conditional visibility rules.

QUESTION 3

What object does the Ensure Funds Apex Flow action look for when resolving Invoice balances associated with an Order Summary?

- A. Order Payments
- B. Payments
- C. Payment Summaries
- D. Order Payment Summaries

Correct Answer: D

The object that the Ensure Funds Apex Flow action looks for when resolving Invoice balances associated with an Order Summary is Order Payment Summaries. This object represents the payments made for an order, and it has a lookup relationship to both Invoice and Order Summary objects. The Ensure Funds Apex Flow action uses this object to calculate the balance due for each Invoice and update its status accordingly.

QUESTION 4

A user is encountering an error when attempting to save an Account record. What can an administrator use to research the issue?

- A. The Problems tab within the developer console
- B. The Chrome Dev Tools Console
- C. Lightning Logs within Setup
- D. A user trace flag and debug log on the affected user

Correct Answer: D

The best way for an administrator to research the issue when a user is encountering an error when attempting to save an Account record is to use a user trace flag and debug log on the affected user. A user trace flag enables debug logging for a specific user, and a debug log captures database operations, system processes, and errors that occur when executing a transaction or running unit tests. The administrator can use these tools to identify the root cause of the error and fix it accordingly.

QUESTION 5

Which three objects are likely to get created in Order Management as an order progresses through its lifecycle?

- A. Fulfillment Order
- B. rma order
- C. Replacement Order
- D. Return Order
- E. Change Order

Correct Answer: ADE

Three objects that are likely to get created in Order Management as an order progresses through its lifecycle are:

Fulfillment Order. A Fulfillment Order is a record that represents a group of products in an order that are fulfilled together from the same location. A Fulfillment Order has a lookup relationship to the Order Summary object, and it contains

information such as the fulfillment location, delivery method, status, etc. Return Order. A Return Order is a record that represents a return request for an order or part of an order. A Return Order has a lookup relationship to both Order

Summary and Change Order objects, and it contains information such as the return reason, status, date, etc.

Change Order. A Change Order is a record that represents a change request for an order or part of an order. A Change Order has a lookup relationship to the Order Summary object, and it contains information such as the change type,

status, date, etc.
