QUESTION 1

Which network device breaks networks into separate broadcast domains?

A. Hub

B. Layer 2 switch

C. Router

D. Wireless access point

Correct Answer: C

A layer 2 switch will break up collision domains but not broadcast domains. To break up broadcast domains you need a Layer 3 switch with vlan capabilities.

QUESTION 2

DRAG DROP

Match each description to a Security Operating Platform key capability.

Select and Place:

understanding the full context of attacks on a network		detect and prevent new, unknown threats with automation
a prevention architecture that exerts positive control based on applications		provide full visibility
a coordinated security platform that detects and accounts for the full scope of an attack		prevent all known threats
creation and delivery of near real-time protections to allow enterprises to scale defenses with technology rather than people		reduce the attack surface area

Correct Answer:

	creation and delivery of near real-time protections to allow enterprises to scale defenses with technology rather than people	detect and prevent new, unknown threats with automation
	understanding the full context of attacks on a network	provide full visibility
	a coordinated security platform that detects and accounts for the full scope of an attack	prevent all known threats
	a prevention architecture that exerts positive control based on applications	reduce the attack surface area

QUESTION 3

What is used to orchestrate, coordinate, and control clusters of containers?

A. Kubernetes

B. Prisma Saas

C. Docker

D. CN-Series

Correct Answer: A

As containers grew in popularity and used diversified orchestrators such as Kubernetes (and its derivatives, such as OpenShift), Mesos, and Docker Swarm, it became increasingly important to deploy and operate containers at scale. https:// www.dynatrace.com/news/blog/kubernetes-vs-docker/

QUESTION 4

A user is provided access over the internet to an application running on a cloud infrastructure. The servers, databases, and code of that application are hosted and maintained by the vendor.

Which NIST cloud service model is this?

A. IaaS

B. SaaS

C. PaaS

D. CaaS

Correct Answer: B

SaaS - User responsible for only the data, vendor responsible for rest

---

QUESTION 5

How does DevSecOps improve the Continuous Integration/Continuous Deployment (CI/CD) pipeline?

A. DevSecOps improves pipeline security by assigning the security team as the lead team for continuous deployment

B. DevSecOps ensures the pipeline has horizontal intersections for application code deployment

C. DevSecOps unites the Security team with the Development and Operations teams to integrate security into the CI/CD pipeline

D. DevSecOps does security checking after the application code has been processed through the CI/CD pipeline

Correct Answer: C

DevSecOps takes the concept behind DevOps that developers and IT teams should work together closely, instead of separately, throughout software delivery and extends it to include security and integrate automated checks into the full CI/ CD pipeline. The integration of the CI/CD pipeline takes care of the problem of security seeming like an outside force and instead allows developers to maintain their usual speed without compromising data security
