### QUESTION 1

A developer created a trigger on the Account object and wants to test if the trigger is properly bulkified. The developer team decided that the trigger should be tested with 200 account records with unique names. What two things should be done to create the test data within the unit test with the least amount of code? Choose 2 answers

- A. Use the `@isTest(isParallel=true)` annotation in the test class.
- B. Use `Test.loadData` to populate data in your test methods.
- C. Use the `@isTest(seeAllData=true)` annotation in the test class.
- D. Create a static resource containing test data.

Correct Answer: BD

---

### QUESTION 2

A sales manager wants to make sure that whenever an opportunity stage is changed to 'Closed Won', a new case will be created for the support team to collect necessary information from the customer. How should a developer accomplish this?

- A. Create a Process Builder to create the new case.
- B. Set up a validation rule on the Opportunity Stage.
- C. Create a lookup field to the Case object on the opportunity object.
- D. Create a workflow rule to create the new case.

Correct Answer: A

---

### QUESTION 3

Universal Containers wants to back up all of the data and attachments in its Salesforce org once a month. Which approach should a developer use to meet this requirement?

- A. Define a Data Export scheduled job.
- B. Use the Data Loader command line.
- C. Schedule a report.
- D. Create a Schedulable Apex class.

Correct Answer: A

---

### QUESTION 4

A developer is creating an application to track engines and their parts. An individual part can be used in different types of engines. What data model should be used to track the data and to prevent orphan records?

- A. Create a junction object to relate many engines to many parts through a master-detail relationship
- B. Create a lookup relationship to represent how each part relates to the parent engine object.
- C. Create a master-detail relationship to represent the one-to-many model of engines to parts.
- D. Create a junction object to relate many engines to many parts through a lookup relationship

Correct Answer: A

---

#### QUESTION 5

Universal Containers (UC) uses a custom object called Vendor. The Vendor custom object has a Master-Detail relationship with the standard Account object. Based on some internal discussion, the UC administrator tried to change the Master-Detail relationship to a Lookup relationship but was not able to do so. What is a possible reason that this change was not permitted?

- A. The Account records contain Vendor roll-up summary fields.
- B. The Vendor object must use a Master-Detail field for reporting.
- C. The Vendor records have existing values in the Account object.
- D. The Account object is included on a workflow on the Vendor object.

Correct Answer: A
