A request is considered a duplicate if the patient name, procedure type, and procedure date match an existing request. You have been given two requirements:

1.

Ensure that users can identify duplicate requests.

2.

If a case is a duplicate, it is not written to the database. Otherwise, write the case to the database.

Which two steps satisfy the requirement that only nonduplicate requests are written to the database? (Choose two.)

What two configuration options do you use to implement this requirement? (Choose two.)

- A. Add a Persist Case shape after the first step.
