Following Questions and Answers are all new published by Pegasystems Official Exam Center

QUESTION 1

Which feature would you use to implement the System of Record (SoR) pattern?

A. The copy data from a data page option on a property

B. No specific feature -- just use a data page directly in the application

C. The Property-Ref activity method

D. The refer to a data page option on a property

Correct Answer: D

QUESTION 2

The customer, a medium size toy maker, wants to fulfill orders received during the peak season in December and process them in batches multiple times a day.

How do you implement this use case?

A. Create a queue processor that can process orders received by the company.

B. Create one scheduled job and select its run schedule as multiple times a day.

C. Create batches of orders and send each batch for processing when it gets full.

D. Create scheduled jobs, one for each run, that can process accumulated orders.

Correct Answer: B

QUESTION 3

You have configured an agent to automatically send correspondence. The agent runs in standard mode using AQM. As of the last agent run, entries failed to commit and the correspondence was not sent.

Which two approaches could you take to troubleshoot the issue? (Choose Two)

A. Open the Requestor Management screen in SMA, select the requestor with a waiting message, and run the Tracer.

B. Open the Requestor Management screen in SMA, select the requestor with a waiting message, and display the error message and stack trace information.

C. Open the Broken Process queue, select an item, and run the Tracer.

D. Open the Broken Process queue, select the entry, and view the error message and stack trace information.

Correct Answer: AD

QUESTION 4

Which two options do you configure on a portal record? (Choose Two)

A. Identify the user role of the type of user who would access the portal.

B. Determine which skin to use to apply branding to the portal.

C. Change the application(s) available to users.

D. Configure the positioning of the navigation pane within the portal.

Correct Answer: AB

QUESTION 5

Which two of the following statements are the most accurate with respect to the error handler flow? (Choose Two)

A. The standard connector error handler flow can help recover from transient errors.

B. The error handler flow is invoked if the error is not handled elsewhere.

C. The error handler flow is the recommended way to handle all integration errors.

D. The standard error handler flow is final and cannot be customized.

Correct Answer: AB
