QUESTION 1

A duplicate case search contains two weighted conditions in which a property value in the current case is compared to the same property value in the existing case. After processing multiple cases that have two matching data values, duplicate case search does not identify any duplicates.

What two approaches do you take to diagnose the cause? (Choose two.)

A. Verify that there are no more than 4 maximum weighted conditions being tested.

B. Verify that the total weights of the matching conditions match or exceed the threshold.

C. Verify that each of the basic conditions are satisfied.

D. Verify that the case type is instantiated as a temporary case so the case can be cancelled.

Correct Answer: BC
