### **QUESTION 1**

DRAG DROP

You are configuring Microsoft Dataverse security. You plan to assign users to teams.

Record ownership and permissions will differ based on business requirements.

You need to determine which team types meet the requirements.

Which team type should you use? To answer, drag the appropriate team types to the correct requirements. Each team type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view

content.

NOTE: Each correct selection is worth one point.

Select and Place:

Access team

### Team types

Ability to own records in Dataverse

Provides permissions without a

security role assigned

### **QUESTION 4**

A company creates a Power Automate cloud flow for a Power Apps app.

The cloud flow must send a daily email that contains a list of year-to-date (VTD) totals.

You need to configure the flow. Which feature should you use?

- A. Parallel branch
- B. Loop
- C. Condition
- D. Wait

Correct Answer: B

In order to send a daily email that contains a list of year-to-date (YTD) totals, you would need to use a loop in the Power Automate cloud flow. A loop allows you to repeat a specific set of actions until a certain condition is met. In this case, the loop would be used to iterate through the data for each day, accumulating the totals for the year-to-date (YTD) and then sending the email at the end of the loop with the accumulated totals.

Here are some references from Microsoft that may be helpful in understanding how to use loops in Power Automate: Microsoft docs: Loops in Power Automate Microsoft docs: Repeating a flow with a loop Microsoft docs: Using the do-until loop in Power Automate

### **QUESTION 5**

### DRAG DROP

A customer has a support website that includes FAQ pages, knowledge articles, and support content.

You plan to leverage an existing Power Virtual Agents bot to enhance and streamline existing support functionality for the existing support portal.

You need to create topics from existing website content. The process must minimize human errors during topic

creation.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Capture suggested topics.	
Identify the pre-filled trigger	phases.
Hover over the topic and sel	ect the Automate icon
Add selected topics to the cl	hatbot.
Enable the topics.	

Correct Answer:

Id	entify the pre-filled trigger phases.
H	over over the topic and select the Automate icon.
	swer
	apture suggested topics.  dd selected topics to the chatbot.
	nable the topics.

You can use content from existing webpages when creating a Power Virtual Agents bot. This is useful if you already have help or support content, such as FAQ pages or support sites. There are three main steps to using the feature:

1.

Select Suggest topics on the Topics page to extract content from FAQ/support pages or online files.

2.

Add the suggested topics to your bot.

3.

Enable the topics.
