QUESTION 1

You are building a custom application in Azure to process resumes for the HR department.

The app must monitor submissions of resumes.

You need to parse the resumes and save contact and skills information into the Common Data Service.

Which mechanism should you use?

- A. Power Automate
- B. Common Data Service plug-in
- C. Web API
- D. Custom workflow activity

Correct Answer: A

Improve operational efficiency with a unified view of business data by creating flows that use Dataverse (Common Data Service has been renamed to Microsoft Dataverse as of November 2020).

For example, you can use Dataverse within Power Automate in these key ways:

Create a flow to import data, export data, or take action (such as sending a notification) when data changes.

Instead of creating an approval loop through email, create a flow that stores approval state in an entity, and then build a custom app in which users can approve or reject items.

QUESTION 2

A company needs to illustrate the relationships of the entities in Dynamics 365 Sales.

You need to select the appropriate tool to show this graphic.

Which tool should you select?

- A. Metadata diagram
- B. Sales Insights
- C. Power Automate
- D. Security model

Correct Answer: A

Visual representation of metadata can be useful, especially when you are trying to describe the relationship between

entities in the system. You can use the Metadata Diagram sample code provided for Dynamics 365 Customer Engagement (on-premises) to generate the entity relationship diagrams.

You can create a diagram that shows a relationship for just one entity, or a complex diagram that includes dozens of related entities, including custom and system entities.

QUESTION 3

You are creating an integration that uses an Azure function to create records in the Microsoft Dataverse when leads are submitted from your company website.

You create a user and grant the user the Basic User security role.

You do not have administrator access to the environment you are using or access to Azure Active Directory. Company policy dictates that service accounts must be used for integrations, and integrations must not be granted privileges beyond

what is needed.

You need to recommend actions that an administrator should perform to configure access for the Azure Function. Which three actions should you perform? Each correct selection presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Create an application registration in Azure Active Directory.
- B. Assign the system administrator security role to the application user.
- C. Assign the Power Platform administrator role to the application user in Azure Active Directory.
- D. Create a new security role with the minimum required permissions and assign to the application user.
- E. Grant the application delegated permissions to the Dynamics CRM API in Azure Active Directory.
- F. Deploy Azure B2B guest permissions to the application user.

Correct Answer: ADE

A: Registering an application with Azure Active Directory, enables a user with Power Apps user account to connect to their Microsoft Dataverse environment from external client applications using OAuth authentication.

D: Use minimum permissions.

E: In the application registration process you delegate permissions to the Dynamics CRM API in Azure Active Directory.

Incorrect:

Not B: The system administrator security role would give the user too much privileges.

Not C: The Power Platform administrator role would give the user too much privileges.

QUESTION 4

HOTSPOT

You need to correct the JavaScript code that communicates with the address verification API.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
You must replace ACTIONNAME in line AV22 with northwind_ValidateAddress	<input type="radio"/>	<input type="radio"/>
You can add code at line AV28 to display an error message returned by the address validation API.	<input type="radio"/>	<input type="radio"/>
Calling the address validation API from the custom action eliminates the error reported by users.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Answer Area

Statements	Yes	No
You must replace ACTIONNAME in line AV22 with northwind_ValidateAddress	<input type="radio"/>	<input checked="" type="radio"/>
You can add code at line AV28 to display an error message returned by the address validation API.	<input checked="" type="radio"/>	<input type="radio"/>
Calling the address validation API from the custom action eliminates the error reported by users.	<input type="radio"/>	<input checked="" type="radio"/>

QUESTION 5

HOTSPOT

A company has a canvas app that has a screen with a gallery of contacts.

Users must be able to search the gallery by last name, email address, and country/region. They must also be able to sort by last name, followed by country/region.

You need to define the expression that meets the requirements.

How should you complete the expression? To answer, select the appropriate options from the answer area.

NOTE: Each correct selection is worth one point.

Correct Answer:

Answer Area

```
Contacts,  
    TextSearchBox1.Text,  
    "lastname",  
    "emailaddress1",  
    "address1_country"  
)  
"lastname",  
Ascending,  
"address1_country",  
Ascending  
)
```

Box 1: SortByColumns

The SortByColumns function can be used to sort a table based on one or more columns.

The parameter list for SortByColumns provides the names of the columns to sort by and the sort direction per column. Sorting is performed in the order of the parameters (sorted first by the first column, then the second, and so on).

Box 2: Filter

The Filter function finds records in a table that satisfy a formula. Use Filter to find a set of records that match one or more criteria and to discard those that don't.
