QUESTION 1

A company plans to use Power BI.

The company plans to share reports indefinitely with a specific set of users.

You need to recommend a solution.

Which solution should you recommend?

- A. Embed code by using the website or portal option.
- B. Share by using a link.
- C. Share directly with the users.
- D. Embed code by using the Publish to web option.

Correct Answer: B

Reference: <https://learn.microsoft.com/en-us/power-bi/collaborate-share/service-share-dashboards>

QUESTION 2

You design integration with an external data source that uses sequential integer values as primary keys for the records contained in it. Data synchronization will occur in Microsoft Dataverse so users can access data.

Data within Microsoft Dataverse must be accurate against the data in the external data source.

You need to ensure that the data from the external data source does not create duplicated rows in Microsoft Dataverse.

Which two features should you use?

Each correct answer presents part of the solution.

- A. Webhook
- B. Change tracking
- C. Duplicate detection rules
- D. Upsert method
- E. Alternate key

Correct Answer: CE

QUESTION 3

HOTSPOT

You need to design the quality inspection order data model.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Requirement

Data type

Capture information about the technician assigned to each service appointment.

	▼
Choice	
Choices	
Customer	
Lookup	

Select the tools that the technician must bring to an appointment.

	▼
Choices	
Customer	
Lookup	
Text	

Correct Answer:

Answer Area

Requirement

Technology option

Save captured images in an appropriate location.

	▼
Business process flow	
Desktop flow	
Instant cloud flow	
Automated cloud flow	

Analyze saved images by using an image recognition process.

	▼
Instant cloud flow and AI Builder	
Automated cloud flow and AI Builder	
Desktop flow and AI Builder	

Display data in real-time dashboards.

	▼
Dynamics 365 interactive experience dashboard	
Model-driven app dashboard with native graphs	
Model-driven app dashboard with Power BI	

Box 1: Create a lookup to Dynamics 365 Field Service

Scenario: Machines are assigned serial numbers and placed in stock until they are shipped to customers.

Entity lookup: Allows technicians to choose a Dynamics 365 record. In the inspection designer interface, admins must select an entity and a field to display. For a chosen entity, the Name field and mandatory fields are the entity attributes that

can be displayed in the lookup.

Box 2: Create a one-to-many relationship and set the behavior to Parental

Scenario: Inspection orders must:

1.

Allow entry of quality ratings of passed or failed for each quality metric identified for the machine being rated.

2.

Be automatically marked as failed if one inspection step rating is marked as failed.

Each inspection order can have one or many inspection steps, and each inspection step has a rating.

Note: Each pair of tables that are eligible to have a 1:N relationship can have multiple 1:N relationships between them. Yet usually only one of those relationships can be considered a parental table relationship.

QUESTION 4

HOTSPOT

You need to design tables for the solution.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Notify the sales manager when an Opportunity changes sales stage.

	▼
Microsoft Power Automate, Microsoft Dataverse connector, and Microsoft Office 365 Outlook connector	
Microsoft Power Automate, Microsoft Dataverse connector, and Microsoft Office 365 users	
Microsoft Power Automate, data alerts, and Microsoft Office 365 connector	

Notify the sales managers when the pipeline drops below 2.5 USD.

	▼
Microsoft Power Automate, Microsoft Dataverse connector, and Microsoft Office 365 Outlook connector	
Microsoft Power Automate, Power BI data alerts, and Microsoft Office 365 connector	
Microsoft Power Automate, Power BI, Power Apps, and Microsoft Dataverse connector	

When reviewing the pipeline in Power BI, a sales executive must be able to add a Playbook to an Opportunity.

	▼
Power BI, Power Apps, Microsoft Dataverse connector, and Microsoft Office 365 Outlook connector	
Microsoft Power Automate, Data alerts, Microsoft Dataverse connector, and Microsoft Office 365 users	
Microsoft Power Automate, Data alerts, and Microsoft Office 365 connector	
Microsoft Power Automate, Power BI, Power Apps, and Microsoft Dataverse connector	

Correct Answer:

Answer Area

Issue	Solution
Migration processes fail due to operation timeouts.	<div>▼</div> <div>Increase multithreading and/or batch size settings.</div> <div>Decrease multithreading and/or batch size settings.</div> <div>Ensure you are loading data into all tables at the same time.</div> <div>Ensure you are loading data into tables in a particular order.</div>
Records that include lookup columns often fail to load.	<div>▼</div> <div>Increase multithreading and/or batch size settings.</div> <div>Decrease multithreading and/or batch size settings.</div> <div>Ensure you are loading data into all tables at the same time.</div> <div>Ensure you are loading data into tables in a specific order.</div>

Box 1: Virtual Table

A virtual table is a custom table in Microsoft Dataverse that has columns containing data from an external data source. Virtual tables appear in your app to users as regular table rows, but contain data that is sourced from an external

database, such as an Azure SQL Database. Rows based on virtual tables are available in all clients including custom clients developed using the Dataverse web services.

Scenario:

First Up uses an on-premises system to manage current and historical patient data including medications and medical visits.

The company plans to reference historical data in the existing system. The records held in these systems will not be migrated to the new solution except for medication information.

The solution must provide a worker appointment booking system that can access worker historical job placement data.

First Up staff members must be able to view and update worker records. They must be able to see current and historical job placement data on the same form in the new solution.

Box 2: Lookup (N:1)

Each worker can have many security clearances, so need a 1:N relationship.

Scenario: The solution must support tracking of security clearance information for a worker including the date, status, and certifying agency.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/create-edit-entity-relationships>

**QUESTION 5****HOTSPOT**

An animal welfare organization wants to track the movement of wolf packs in a region. Cameras at specific locations capture images when motion is detected within the camera sensor range. Staff upload the images manually to a shared drive and then analyze the images.

The organization wants to automate image capture and analysis. The organization has the following requirements:

1.

Save captured images in an appropriate location.

2.

Analyze saved images by using an image recognition process.

3.

Display data in real-time dashboards.

You need to recommend the correct technology for the requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Box 1: Automated cloud flow.

Create a cloud flow when you want your automation to be triggered either automatically, instantly, or via a schedule.

Automated flows: Create an automation that is triggered by an event such as arrival of an email from a specific person, or a mention of your company in social media.

Incorrect Answers:

1.

Business process flows provide a guide for people to get work done.

2.

Desktop flows are used to automate tasks on the Web or the desktop.

3.

Instant flows: Start an automation with a click of a button. Wide range of tasks such as requesting an approval, an action in Teams or SharePoint.

Box 2: Desktop flow and AI Builder Desktop flows are used to automate tasks on the Web or the desktop. Using Power Automate Desktop you can automate tasks on the desktop as well as the Web. Box 3: Model-driven app dashboard with Power BI

The Power BI cloud service works with Microsoft Dataverse apps to provide a self-service analytics solution. Power BI automatically refreshes the app's data displayed.
