QUESTION 1

You need to recommend a solution to collect the information required to meet reporting requirements.

What should you recommend?

- A. Business process flow
- B. Business rule
- C. Business event
- D. Business process modeler

Correct Answer: B

Business rule can create business recommendations based on business intelligence.

Scenario: Analytics and reporting The solution must:

1.

Provide metrics including existing and upcoming demand by inspection station, average time spent per user at a station, and average time a machine spends at each inspection point.

2.

Provide metrics per inspector including number of inspections performed by month, and number of inspections per rating type (pass, fail).

3.

Provide a printed quality certificate to be included with each machine.

Incorrect Answers:

D: Business process modeler (BPM) in Microsoft Dynamics Lifecycle Services (LCS) is a tool that you can use to create, view, and modify repeatable implementations that are based on business process libraries.

QUESTION 2

A company plans to use Microsoft Power Platform.

The company wants to enhance the user experience of its apps. The company requires a reusable custom color picker control that can be added to model-driven app forms and canvas app screens.

You need to recommend a solution.

Which solution should you recommend?

- A. Web resources

B. Power Apps component framework

C. Plug-ins

D. Client script

Correct Answer: B

Explanation:

Power Apps component framework empowers professional developers and app makers to create code components for model-driven and canvas apps. These code components can be used to enhance the user experience for users working

with data on forms, views, dashboards, and canvas app screens. For example, you can:

Replace a column on a form that displays a numeric text value with a dial or slider code component.

Transform a list into an entirely different visual experience bound to the dataset, like a Calendar or Map.

Not A: How is it [Power Apps component framework] different from web resources?

Unlike HTML web resources, code components are rendered as part of the same context and loaded at the same time as any other components, providing a seamless experience for the user.

You can create code components that can be used across the full breadth of Power Apps capabilities, and reuse these components many times across different tables and forms.

Developers can bundle all the HTML, CSS, and TypeScript files into a single solution package file and move across environments, and also make it available via AppSource.

QUESTION 3

DRAG DROP

You need to propose a solution for form requirements.

What should you recommend? To answer, drag the appropriate solutions to the correct requirements. Each solution may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Answer Area

Requirement	Action
Obtain the serial number and other machine attributes for use in the inspection order.	<div style="border: 1px solid gray; padding: 2px;"> <div style="background-color: #f0f0f0; padding: 2px; text-align: right;">▼</div> <div style="padding: 2px;">Use a virtual table.</div> <div style="padding: 2px;">Import to a custom table.</div> <div style="padding: 2px;">Create a lookup to Dynamics 365 Field Service.</div> </div>
Configure the relationship between inspection orders and inspection ratings.	<div style="border: 1px solid gray; padding: 2px;"> <div style="background-color: #f0f0f0; padding: 2px; text-align: right;">▼</div> <div style="padding: 2px;">Create a one-to-many relationship and set the behavior to Parental.</div> <div style="padding: 2px;">Create a many-to-many relationship and set the behavior to Parental.</div> <div style="padding: 2px;">Create a one-to-many relationship and set the behavior to Cascade None.</div> <div style="padding: 2px;">Create a many-to-many relationship and set the behavior to Cascade None.</div> </div>

Correct Answer:

Box 1: Field controls

You must standardize the format used by agents to enter customer phone numbers.

Box 2: Workflow

Log issues as cases. The case form must show variable sections based on the case type.

QUESTION 4

A company has a list of contacts in a Microsoft Excel file. The company wants to load the contact information into a Power Platform solution.

You need to recommend a data-loading solution.

What should you recommend?

- A. Use the Excel Template feature.
- B. Add to an existing list of contacts in a static worksheet.

C. Use the import from Excel feature.

Correct Answer: A

Import data that's stored somewhere else into your model-driven app using the import feature in Power Apps.

Every table has required columns that must exist in your input file. It's recommended that you download an Excel template, add your data, and then import the file to your app. The template saves time and effort. Don't add or modify columns

in the template to avoid issues during the import.

Note:

Step 1: Download an Excel template

To avoid mapping issue, it's recommended that you use an Excel template that you can download from your app. Once the template is downloaded add your data and then import the file back to your app. Remember don't add or modify

columns in the template to avoid issues during the import process.

Step 2: Import your data

Use the template that you downloaded in the previous step (modified with your data) and import the file to your app.

Reference:

<https://docs.microsoft.com/en-us/powerapps/user/import-data>

QUESTION 5

You need to recommend an environment for the inspection solution.

Where should you recommend installing the solution?

- A. within the Dynamics 365 Field Service environment
- B. within the default Dynamics 365 Field Service environment
- C. in a separate Microsoft Dataverse environment in the same instance as the Dynamics 365 Field Service environment
- D. in a separate Dataverse environment with Dynamics 365 apps enabled

Correct Answer: A

General requirements include:

You must be able to reference inspection information and quality certification information from within Dynamics 365 Field Service. Technicians must be able to view referenced inspection information from the custom solution when they perform maintenance on machines.
