QUESTION 1

A company uses a Microsoft Excel sheet to manage its loan application process.

The company wants to optimize the process.

You need to discover inefficiencies in the process.

Solution: Record the actions required to complete the loan application process in the process advisor feature. Use task mining to discover inefficiencies in the process.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: A

Explanation:

Task mining is a technology that enables organizations to capture detailed steps for tasks performed on users' desktops, either independently or collaboratively with colleagues.

By analyzing recorded user actions, task mining allows organizations to gain insights into how they perform tasks, identify common mistakes made during task performance, and pinpoint tasks that can be automated, all of which can help

optimize their business processes.

Task mining is a powerful tool for streamlining workflows, identifying inefficiencies and bottlenecks in workflows, reducing costs, and fostering a culture of continuous improvement where employees are encouraged to optimize their work

processes.

QUESTION 2

You need to investigate the canvas app functionality issues.

Which two tools can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. App checker

B. Errors function

C. Solution checker

D. Power Platform admin center

Correct Answer: AC

Scenario: The testing team reports that one of the canvas apps is not working as expected. An error message displays as specific pages load.

A: The App checker is now available to help provide a clear list of formula issues in your app, and to provide items to fix to make your app accessible. The App checker is an area that the PowerApps team will continue to invest in, and build on in order help to make debugging, performance and best practice decisions an easier and more guided experience.

C: With the solution checker feature, you can perform a rich static analysis check on your solutions against a set of best practice rules and quickly identify these problematic patterns. After the check completes, you receive a detailed report that lists the issues identified, the components and code affected, and links to documentation that describes how to resolve each issue.

QUESTION 3

HOTSPOT

An organization is optimizing its Microsoft Power Platform solution architecture.

The optimization needs to address the following:

1.

Label names for option sets and multiselect option sets should be added as separate fields for reporting.

2.

Users complain that when a case is assigned to another user, all the activities are also assigned.

3.

Some Power BI reports based on Microsoft Dataverse data need near-real-time updating.

You need to recommend a design solution to meet these requirements.

What should you recommend? To answer, select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Requirement

Ensure that users can search for specific records by using a unique identifier.

You must prevent data entry into columns that do not require entry.

Solution

▼

| |
|--------------------------|
| Business rule |
| Autonumber column |
| Business process flow |
| Duplicate detection rule |

▼

| |
|--------------------------|
| Business rule |
| Real time workflow |
| Business process flow |
| Duplicate detection rule |

Correct Answer:

Answer Area

Requirement

Solution

Ensure that users can search for specific records by using a unique identifier.

Business rule
Autonumber column
Business process flow
Duplicate detection rule

You must prevent data entry into columns that do not require entry.

Business rule
Real time workflow
Business process flow
Duplicate detection rule

Box 1: For each activity..

Cascade None: Do nothing

Note:

Cascade All: Perform the action on all referencing table records associated with the referenced table record.

Cascade Active: Perform the action on all active referencing table records associated with the referenced table record.

Box 2: Create Power BI reports using the Microsoft Dataverse connector

Use the Dataverse connector in DirectQuery mode: Connects directly to the data in Dataverse. Use this mode for real-time data retrieval.

Reference:

<https://docs.microsoft.com/en-us/powerapps/developer/data-platform/configure-entity-relationship-cascading-behavior>

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/data-platform-powerbi-connector>

QUESTION 4

You are designing a Microsoft Power Platform solution to help a company manage sales leads. The solution has the following requirements:

1.

Ensure that users follow a predefined sales process regardless of the device that employees use to access the app.

2.

Respond to sales events by using organization-defined best practices.

You need to recommend a component for the app.

What should you recommend?

A. Power Automate cloud flow

B. Business process flow

C. Power Automate desktop flow

D. Playbook

Correct Answer: B

You can help ensure that people enter data consistently and follow the same steps every time they work with a customer by creating a business process flow. For example, you might want to create a business process flow to have everyone handle customer service requests the same way, or to require that people get approval for an invoice before submitting an order. Business process flows use the same underlying technology as other processes, but the capabilities that they provide are very different from other features that use processes.

QUESTION 5

HOTSPOT

You need to recommend the appropriate components to meet the inspection requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Requirement

Solution

Data storage and normalization.

| | ▼ |
|-------------------------|---|
| Data Gateway | |
| Azure Data Lake | |
| Dataverse for Teams | |
| Azure Analysis Services | |

Visibility to key operational metrics from various Teams channels.

| | ▼ |
|------------------------------------|---|
| Power BI | |
| AI Builder | |
| Teams adaptive cards | |
| Microsoft Teams integration object | |

Correct Answer:

Answer Area

Requirement

Design

Users report that when a case is assigned to another user, all activities are also assigned.

| | ▼ |
|---|---|
| For each activity entity relationship, set Cascading rules to Configurable Cascading and Assign to Cascade None | |
| Do not implement, but train users on best practices for assigning cases. | |
| Create a 1:N relationship between the user entity/table and the Activities table. | |

Some Power BI reports based on Microsoft Dataverse data require near-real-time updates.

| | ▼ |
|---|---|
| Create Power BI reports using the Microsoft Dataverse connector. | |
| Implement the Data Export Service; create Power BI reports that point to Microsoft Azure SQL Database. | |
| Create Power BI dataflows based on the Microsoft Dataverse connector; point the Power BI report to the dataflows. | |

Box 1: Security role

Microsoft Dataverse uses a role-based security model to help secure access to the database.

Scenario:

1.

You must prevent users from changing inspection order data once an inspection is marked as final.

2.

Supervisors must be able to modify standard checklists. Other employees must be prevented from modifying checklists.

Box 2: Data flow Dataflows are a self-service, cloud-based, data preparation technology. Dataflows enable customers to ingest, transform, and load data into Microsoft Dataverse environments, Power BI workspaces, or your organization's Azure Data Lake Storage account.

Scenario: Provide a visual representation of the testing measurement limits for each step. Include an indication of how the measured value compares to measurement limits and whether the measurement is within tolerance. Users must be able to configure the visualizations to display the minimum value and maximum value, and whether the reading is within the tolerance of a single targeted value. It must also be able to be used for maintenance inspections once the machine has been installed.
