QUESTION 1

What is the practice of branching code in a version control system?

- A. Combining two or more branches of code into a single code base
- B. Creating a copy of existing code, isolated from the original code
- C. Releasing a specific codebase into a production environment
- D. Tagging or labeling a particular codebase as production ready

Correct Answer: B

Branching means that you create a new version from the code that exists independently from the original code. It is not isolated forever, it can be merged back later.

QUESTION 2

Which are four attributes of a good bug report?

- A. Screenshots or pictures of the bug in action, if possible
- B. Explains some new system functionality desired
- C. Includes build or version number where bug was found
- D. Expected results and observed results
- E. Provides simple and repeatable reproduction steps
- F. Includes code for a proposed fix

Correct Answer: ACDE

QUESTION 3

While developing new functionality, you find a bug that has already been delivered to the customer. What do you do?

- A. Fix the bug
- B. Revise the tests to hide the bug from the tests reports
- C. Talk to the product owner
- D. Stub out the code that causes the bug

Correct Answer: C

The product owner knows what creates most value. Since this is already delivered, it is not part of the current sprint.

QUESTION 4

When is performance testing most effectively performed?

- A. In production during peak hours
- B. Often during the development
- C. In production
- D. Just before deployment to production

Correct Answer: B

It's best to do it often during development so that problems can be detected early. Performance testing on production will disturb the production environment.

QUESTION 5

What is not a desirable characteristics of a unit test? Test code is as small as possible

- A. Execution is fast
- B. Independent of others
- C. Includes exercising the persistence layer
- D. Makes assertions about only one logical concept

Correct Answer: C

you don't want your unit test to really make changes so it cannot exercise the real persistence layer.
