### QUESTION 1

Traps agents use a default password for uninstallation in the event that they never communicate with their ESM server.

Identify the password.

- A. PaloAlto!
- B. Uninstall1
- C. No password is required
- D. Password1

Correct Answer: D

---

### QUESTION 2

An administrator is concerned about rogue installs of Internet Explorer. Which policy can be created to assure that Internet Explorer can only run from the \Program Files \Internet Explorer \directory?

- A. An execution path policy to blacklist iexplore.exe, and whitelist entry for %programfiles%\iexplore.exe
- B. An execution path policy to blacklist \*\iexplore.exe. Trusted signers will allow the default iexplore.exe
- C. A whitelist of \*\iexplore.exe with an execution path restriction, and a blacklist of %system%\iexplore.exe
- D. An execution path policy to blacklist \*\iexplore.exe, and a whitelist entry for %programfiles%\Internet Explorer\iexplore.exe

Correct Answer: D

---

### QUESTION 3

Once an administrator has successfully instated a Content Update, how is the Content Update applied to endpoint?

- A. After Installation on the ESM, an Agent License renewal is required in order to trigger relevant updates.
- B. After installation on the ESM, relevant updates occur at the next Heartbeat communication from each endpoint.
- C. Installation of a Content Update triggers a proactive push of the update by the ESM server to all endpoints with licensed Traps Agents within the Domain.
- D. The Traps Agent must be reinstalled on the endpoint in order to apply the content update. Existing Agents will not be able to take advantage of content updates.

Correct Answer: B

---

#### QUESTION 4

During installation of the ESM and the agent, SSL was enabled on an endpoint. However, the agent communication is failing. The services.log on the endpoint has the following error.

\*An error occurred while making the HTTP request to https: //hostname:2125/CyveraServer/. This could be due to the fact that the server certificate is not configured property with HTTP SYS in the HTTPS case. This could also be caused by a mismatch of the security binding between the client and the server."

Which certificate can be imported on the endpoint to solve this issue? Assume the hostname is a valid FQDN and the ESM Server and Console have different certificates.

- A. ESM Server Public Certificate
- B. ESM Server Serf-Signed Certificate
- C. ESM Console Self-Signed Certificate
- D. ESM Console Public Certificate

Correct Answer: B

---

#### QUESTION 5

A customer plans to test the malware prevention capabilities of Traps. It has defined this policy. Local analysis is enabled Quarantining of malicious files is enabled Files are to be uploaded to WildFire

No executables have been whitelisted or blacklisted in the ESM Console Hash Control screen. Malware sample A has a verdict of Malicious in the WildFire service. Malware sample B is unknown to WildFire. Which behavior will result?

- A. WildFire will block sample A as known malware; sample B will be blocked as an unknown binary while the file is analyzed by WildFire for a final verdict.
- B. Hash Control already knows sample A locally in the endpoint cache and will block it. Sample B will not be blocked by WildFire, but will be blocked by the local analysis engine.
- C. WildFire will block sample A as known malware, and sample B will compromise the endpoint because it is new and ESM Server has not obtained the required signatures.
- D. WildFire will block sample A as known malware; sample B will not be blocked by WildFire, but will be evaluated by the local analysis engine and will or will not be blocked, based on its verdict, until WildFire analysis determines the final verdict.

Correct Answer: D
