QUESTION 1

Which two features are found in a next-generation firewall but are absent in a legacy firewall product? (Choose two)

- A. Identification of application is possible on any port
- B. Traffic is separated by zones
- C. Traffic control is based on IP, port, and protocol
- D. Policy match is a based on application
- E. Onboard SSL decryption capability is used

Correct Answer: AD

QUESTION 2

What is the recommended way to ensure that firewalls have the most current set of signatures for up-to-date protection?

- A. Store updates on an intermediary server and point all the firewalls to it
- B. Monitor update announcements and manually push updates to firewalls
- C. Utilize dynamic updates with an aggressive update schedule
- D. Run a Perl script to regularly check for updates and alert when one is released

Correct Answer: B

QUESTION 3

A customer is adopting Microsoft Office 365 but is concerned about the potential security exposure that such a move could mean. The security analyst suggests using Aperture and the Palo Alto Network firewall together to provide data and network security.

What are the two reasons this solution has been suggested? (Choose two.)

- A. The firewall secures data in transit between the network and the cloud.
- B. Aperture prevents users from using non-sanctioned SaaS applications.
- C. The firewall scans data that resides in the cloud for malware.
- D. Aperture scans data that resides in the cloud for sensitive information.

Correct Answer: AB

QUESTION 4

What is the HA limitation specific to the PA-200 appliance?

- A. Can be deployed in either an active/passive or active/active HA pair
- B. Can only synchronize configurations and does not support session synchronization
- C. Has a dedicated HA1 and HA2 ports, but no HA3
- D. Is the only Palo Alto Networks firewall that does not have any HA capabilities

Correct Answer: B

QUESTION 5

A customer is targeted by a true zero-day, targeted attack. However, the customer is protected by the Palo Alto Networks security platform. The attack leverages a previously unknown vulnerability in IE but utilizes existing hacking techniques on the endpoint. It is transported over standard HTTP traffic and conforms to the HTML standards. It then attempts to download from a website, compromised specifically for this attack, a custom piece of malware to run on the endpoints.

Which element of the platform will stop this attack?

- A. App-ID
- B. PAN-DB
- C. Traps
- D. WildFire

Correct Answer: D
